Hiring Team
Cello

Dear Hiring Team,

Cello's approach to referral infrastructure, embeddable widgets that run inside customer products, attribution engines processing millions of events, recommendation models that drive real revenue, is the kind of technically demanding work I've spent 8 years building towards. Your stack is React and NestJS. That's the exact combination I used to architect OurNigeria (ournigeria.ng), an Nx monorepo managing 6 applications, including two NestJS backends and three Next.js frontends, serving a multi-agent AI system with 708K+ vector embeddings and real-time SSE streaming. I know what it takes to build products that are both technically deep and user-facing at scale.

The challenge of writing code that runs in environments you don't control is one I've tackled directly. At Genentech, as a Frontend Engineer (React / Full Stack), I led the migration of a clinical data product from Vue.js to a React Chrome extension embedded in third-party EHR systems, and co-developed an embeddable Next.js chat widget powered by a RAG system using OpenAI, LangChain, and Chroma. Earlier, at ActivEdge Technologies as a Senior React Developer, I built a high-volume bank settlement solution processing thousands to millions of daily transactions through a multi-tenant architecture, boosting settlement rates by 80%, with real-time data streaming via the EventSource API. These are the same patterns Cello deals with: embeddable code, high-throughput events, and multi-tenant infrastructure at scale.

I'm drawn to Cello specifically because of the stage you're at, real traction with customers like Typeform, Miro, and Descript, a small team where engineers genuinely shape the product, and technically interesting problems that go well beyond CRUD. I use AI tools daily in my workflow and thrive in environments where I can take full ownership of features from frontend to backend to deployment. I'd love to discuss how my experience building production systems across the full stack can contribute to Cello's growth.

Sincerely,

Ogbonna Arinze
