Hiring Manager
1KOMMA5°
Germany

Dear Hiring Manager,

1KOMMA5°'s mission to build Germany's largest one-stop-shop for the clean energy transition is a critical step toward achieving the Paris Agreement targets. As a Senior Software Engineer with 8 years of experience building high-throughput, business-critical applications, I am drawn to the Order Route team's challenge of scaling the end-to-end order management pipeline. I specialize in the exact stack driving your operations: TypeScript, React, Next.js, and NestJS.

In my recent work architecting the OurNigeria platform, I built a complex, multi-application system from the ground up using an Nx monorepo. I developed the backend services with NestJS and PostgreSQL, and the frontend with Next.js and React 19. I owned the entire software development life cycle, establishing the CI/CD pipeline with GitHub Actions for automated Playwright testing and deploying the infrastructure using Docker. This end-to-end ownership aligns perfectly with your need for an engineer who can establish scalable architecture and drive project execution from concept to deployment.

Furthermore, at ActivEdge Technologies, I played a pivotal role in building a high-volume bank Settlement Solution that processed millions of daily transactions. I enhanced system performance and data streaming capabilities, boosting transaction settlement rates by 80%. This experience in solving complex operational problems and managing critical data pipelines translates directly to the routing optimization and order management challenges faced by 1KOMMA5° as you scale your installation operations across Germany.

I am passionate about writing maintainable, testable TypeScript code and reducing technical debt to accelerate delivery. I would welcome the opportunity to bring my expertise in Next.js, NestJS, and cloud infrastructure to 1KOMMA5°, helping your team automate manual processes and streamline the clean energy transition.

Thank you for your time and consideration. I look forward to discussing how my technical background and product-focused mindset can contribute to your mission.

Sincerely,

Arinze Ogbonna
