Hiring Team
Kertos
Munich / Berlin, Germany

Dear Hiring Team,

When I learned about Kertos's mission to compress compliance and audit preparation from weeks to hours, I immediately recognized the technical challenge. Building the "European Champion for Compliance Automation" requires robust infrastructure, highly reliable data pipelines, and intelligent AI orchestration. As a Senior Fullstack Engineer with 8 years of experience architecting complex platforms and a deep alignment with AI-first development workflows, I am eager to bring my expertise in React, TypeScript, and LLM integrations to your engineering team.

At OurNigeria, I recently architected and built an AI-powered data analysis platform from the ground up to process complex regulatory and budget data. I designed a multi-agent AI system using the Mastra framework and built a hybrid RAG pipeline combining pgvector similarity search with BM25 full-text search. This system successfully processed over 700 complex documents and 708K+ vector embeddings across 37 states with zero ingestion errors. I managed the entire stack within an Nx monorepo, deploying the NestJS backend and Next.js frontend via Docker and GitHub Actions CI/CD pipelines, ensuring the infrastructure was as reliable as the AI outputs it generated.

Furthermore, at Genentech, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI's GPT models and LangChain, enabling users to query complex clinical trial data in real time. I also spearheaded the migration of a critical data transfer product to a React Chrome extension, optimizing performance and ensuring secure JWT-based authentication for sensitive workflows. My approach to engineering is heavily augmented by AI tools like Cursor and Copilot, allowing me to ship features rapidly while maintaining high standards for code quality and test coverage.

While my recent production backend architecture has centered around NodeJS and NestJS, my strong foundation in backend design, SQL optimization, and personal project experience with Python positions me to adapt rapidly to your Django and FastAPI stack. I thrive in fast-moving environments where I can own features end-to-end and collaborate closely with product and AI research teams.

I would welcome the opportunity to discuss how my background in full-stack architecture and AI-powered systems can help Kertos scale its compliance automation platform across Europe. Thank you for your time and consideration.

Best regards,

Ogbonna Arinze
