Hiring Team
MOBIKO GmbH
Munich, Germany

Dear Hiring Team,

Replacing legacy company car models with flexible, sustainable mobility allowances is a compelling mission that aligns with my drive to build impactful B2B SaaS platforms. With 8 years of professional experience, including extensive remote work in high-autonomy teams, I am excited to apply for the Senior Full Stack Developer role at MOBIKO.

My technical background directly mirrors your stack. At OurNigeria, I architected a complex Nx monorepo managing a NestJS API backend and Next.js frontend, backed by a PostgreSQL database. I took full ownership of the deployment pipeline, configuring Docker Compose and GitHub Actions to ensure reliable, scalable production releases. This full-stack delivery experience ensures I can immediately contribute to your NestJS and React/Vue.js ecosystem.

Furthermore, I have a strong track record of elevating code quality and test coverage. At Descasio, I introduced Jest and Enzyme testing frameworks, which led to a 20% decrease in bug reports for our B2B SaaS product. More recently at Genentech, I maintained a legacy Vue.js codebase while leading a migration to React, and I increased stakeholder confidence by integrating comprehensive Playwright end-to-end tests into our CI/CD pipeline.

I thrive in remote-first environments where developers are expected to take ownership from design to deployment. I would welcome the opportunity to discuss how my experience with NestJS, React, Vue.js, and modern DevOps practices can help MOBIKO continue to scale its mobility management platform.

Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
