Hiring Team
Peter Park System GmbH
Munich, Germany

Dear Hiring Team,

Replacing physical parking barriers with seamless, software-only solutions powered by computer vision is a brilliant approach to modernizing urban infrastructure. When I learned that Peter Park's platform operates across 500+ edge devices and processes thousands of transactions per hour, I knew my background in high-throughput systems and full-stack TypeScript development would be a strong fit. With 8 years of professional experience, I specialize in the exact stack you use to drive this innovation: Vue.js, NestJS, TypeScript, and PostgreSQL.

Your requirement for engineers who can maintain resilient, high-volume systems aligns perfectly with my work as a Senior React Developer at ActivEdge Technologies. There, I helped build a bank Settlement Solution that processed thousands to millions of transactions daily, ultimately boosting transaction settlement rates by 80%. I understand the rigorous performance and reliability standards required when software directly handles financial transactions and real-world operations.

On the backend, I recently architected the OurNigeria platform as a Senior Engineer, building a complex NestJS API and document ingestion pipeline backed by PostgreSQL and Prisma. I orchestrated the entire system as an Nx monorepo and deployed it using Docker and GitHub Actions CI/CD pipelines. On the frontend, my time as a Frontend Engineer at Genentech involved maintaining and extending a legacy Vue.js codebase while simultaneously migrating it to a modern React architecture. I am highly focused on delivering polished, operator-facing interfaces, having previously reduced bundle sizes by 30-40% and improved load times by 35% at Descasio to ensure a seamless user experience.

I am drawn to Peter Park's pragmatic, fast-moving engineering culture and the opportunity to take end-to-end ownership of features that directly impact how people navigate cities. I am fully prepared to collaborate with your ML and DevOps teams to integrate computer vision pipelines into the core platform, and I am highly motivated to contribute to your team in Munich.

Thank you for considering my application. I would welcome the opportunity to discuss how my full-stack experience can help scale Peter Park's infrastructure.

Best regards,

Ogbonna Arinze
