Hiring Team
PiNCAMP (ADAC Camping GmbH)
Torstrasse 131
10119 Berlin

Dear Hiring Team,

As an engineer who appreciates the stability of corporate backing combined with the agility of a startup product culture, I was immediately drawn to the Senior Fullstack Engineer role at PiNCAMP. The challenge of scaling Europe's dominant digital camping platform aligns perfectly with my 8 years of experience building high-traffic, performance-critical web applications using React, Next.js, and GraphQL architectures.

At Genentech, I spearheaded the redesign of our main clinical trial data product, migrating a legacy application to a modern React architecture. A core part of this transition involved integrating complex internal and external APIs using GraphQL and REST, managing authentication, caching, and schema evolution. To ensure performance at scale, I optimized rendering and loading times through code splitting, dynamic imports, and CDN asset delivery, resulting in significant load time reductions measured via Lighthouse. I also increased our release reliability by integrating Playwright end-to-end tests into our CI/CD pipeline, ensuring that our high-stakes data platform remained stable across deployments.

My experience building scalable systems extends to full product ownership. For OurNigeria, I architected a multi-application Nx monorepo, building the citizen-facing frontend with Next.js (utilizing SSR for SEO optimization) and the backend with NestJS and PostgreSQL. At Descasio, I drove a 40% improvement in application performance by optimizing caching mechanisms and reduced bundle sizes by 30-40% through rigorous profiling. Across all these roles, I have thrived in cross-functional squads, taking architectural ownership and mentoring junior developers to elevate the entire team's code quality.

I am excited about the opportunity to bring my deep understanding of Next.js, GraphQL BFF services, and performance optimization to PiNCAMP, helping to digitize the camping industry end-to-end. I would welcome the chance to discuss how my technical background and ownership mindset can contribute to your engineering team in Berlin.

Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
