Hiring Manager
reisetopia GmbH
Dessauer Straße 28-29
10963 Berlin

Dear Hiring Manager,

As an engineer who appreciates the intersection of premium editorial content and seamless booking technology, I was immediately drawn to the Mid/Senior Full Stack Engineer position at reisetopia. With 8 years of professional experience specializing in TypeScript, React, and Node.js, I have a proven track record of modernizing legacy codebases, architecting scalable systems, and taking full-stack ownership of complex product features. I am excited about the opportunity to help scale reisetopia's travel discovery platform and build robust customer journeys.

My experience aligns directly with your technical stack and engineering goals. In my current role as a Frontend Engineer (React / TypeScript) at Genentech, I spearheaded the modernization of a critical clinical trial data product, migrating it from a legacy Vue.js web application to a modern React and TypeScript architecture. I introduced Redux for state management and increased stakeholder confidence by writing comprehensive end-to-end tests with Playwright in the CI/CD pipeline. Previously, as a Senior Frontend Developer at Descasio, I optimized frontend performance to achieve a 30-40% bundle reduction and a 35% faster load time, while introducing Jest to decrease bug reports by 20%.

On the backend, I am highly experienced in designing robust APIs and managing both SQL and NoSQL databases. As a Senior Engineer for OurNigeria, I architected an Nx monorepo managing 6 applications, including a Node.js (NestJS) API backend and a React (Next.js) web app, backed by a SQL (PostgreSQL) database with Prisma. Additionally, during my time at Founders Lair and SureTrade Business Solutions, I developed Node.js RESTful APIs and designed MongoDB database schemas to power scalable, testable features.

I thrive in agile environments where clean code, software architecture best practices, and direct product ownership are valued. I would welcome the opportunity to bring my technical expertise to reisetopia's team and contribute to your mission of redefining luxury travel booking. Thank you for considering my application. I look forward to discussing how my background aligns with your engineering needs.

Sincerely,

Ogbonna Arinze
