Hiring Team
trbo GmbH
Munich, Germany

Dear Hiring Team,

When I learned about trbo's mission to deliver real-time, AI-powered personalization at scale for over 200 eCommerce clients, I knew I had to apply for the Senior AI-Native Fullstack Engineer position. Having spent the last 8 years building high-performance web applications and recently architecting a multi-agent LLM pipeline from the ground up, I am excited by the opportunity to embed generative AI deeply into trbo's SaaS platform.

At OurNigeria, I architected a distributed system as an Nx monorepo and built a multi-agent AI system using the Mastra framework and the OpenAI API. I designed a hybrid RAG pipeline combining pgvector similarity search with BM25 full-text search, managing over 708,000 vector embeddings to enable complex, domain-specific analysis. Similarly, as a Frontend Engineer at Genentech, I co-developed a Next.js chat widget powered by a RAG system using LangChain and the Vercel AI SDK. These experiences have ingrained an "AI-native" mindset into my daily development workflow, where I regularly leverage AI tooling to prototype rapidly and accelerate feature delivery.

Beyond AI integration, I bring deep expertise across the full stack. As a Senior Frontend Developer at Descasio, I led the design of an intuitive React user interface that achieved a 25% boost in user engagement. I also optimized frontend performance to reduce bundle size by 30-40% and achieve a 35% faster load time. My backend foundation includes designing robust RESTful APIs in NodeJS and NestJS, alongside early-career experience with PHP. Furthermore, I am highly comfortable with containerized deployments, having configured CI/CD pipelines with GitHub Actions and Docker Compose to ensure scalable and reliable infrastructure.

I am eager to bring my blend of modern frontend architecture, backend system design, and production AI experience to trbo's engineering team. I welcome the opportunity to discuss how my technical background aligns with your vision for AI-augmented workflows and personalized web experiences. Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
