SUMMARY

Senior Software Engineer with 8 years of professional experience specializing in Node.js, TypeScript, and modern React ecosystems (Next.js). Product-obsessed systems thinker with a proven track record of owning mission-critical applications from database to UI. Adept at designing scalable backend services, integrating complex third-party providers, and leveraging CI/CD (GitHub Actions) to deliver high business value over writing unnecessary code. Thrives in agile environments, taking features from whiteboard concepts to deployed, monitored services.

CORE COMPETENCIES

- **Backend & APIs:** Node.js, TypeScript, REST APIs, GraphQL, NestJS, JWT Authentication.
- **Frontend:** React, Next.js, TypeScript, Tailwind CSS, State Management (Redux, React Query).
- **Data & Infrastructure:** MongoDB, PostgreSQL, Prisma, AWS, Docker, CI/CD, GitHub Actions.
- **Engineering Mindset:** Systems Architecture, Third-party Integrations, Agile/Lean, Product Ownership.

WORK EXPERIENCE

Wunderflats Berlin, Germany (Hybrid)
Software Engineer *Jun 2026 - Present*

- Joining the Payments and Pricing platform team to own mission-critical financial systems end-to-end, from database to API to user interface, building robust backend services in **Node.js** and **TypeScript**.
- Contributing to "The Contract Engine" initiative to automate contracts across European markets (DE, AT, FR, BE, LU, CH, IT, PT, ES), focusing on third-party provider integrations and surgical solutions over unnecessary code.
- Taking features from whiteboard ideas to deployed, monitored services, applying systems thinking to race conditions, data consistency, and edge cases in financial workflows.

Genentech (Roche) San Francisco, CA (Remote)
Frontend Engineer *May 2023 - Jan 2026*

- Spearheaded the architectural redesign of a mission-critical clinical trial data product, applying domain-driven design principles (such as bounded contexts and separation of concerns) to migrate from a legacy Vue.js application to a scalable **React** Chrome extension.
- Architected a reusable design system in **React** and Radix UI utilizing atomic design principles, establishing strict component boundaries, and ensured reliability through comprehensive accessibility testing (WCAG) and **Storybook** documentation.
- Led the refactoring of legacy React codebases from class to functional components using SOLID principles, introducing Redux and React Query to establish clear unidirectional data flow and robust request caching.
- Co-designed the system architecture for a full-stack **Next.js** chat widget powered by a RAG system using OpenAI GPT models and Vercel AI SDK, enabling users to query data via a conversational interface.
- Designed and implemented robust JWT-based authentication workflows and role-based access control in **Next.js** with **TypeScript**, securing client-side routes and enforcing permission-based UI rendering.

Descasio Lagos, Nigeria (Hybrid)
Senior Frontend Developer *May 2021 - Mar 2023*

- Exercised end-to-end product ownership in designing and implementing an intuitive **React** and **TypeScript** user interface, aligning technical solutions with business requirements to drive a 25% boost in user engagement.
- Architected a scalable frontend infrastructure and robust design system using component-driven principles and **Storybook**, ensuring cross-team UI consistency and accelerating feature development by 30%.
- Championed engineering excellence by establishing strict code quality standards and automated deployment pipelines via **GitHub Actions**, ESLint, and Husky, significantly reducing errors and accelerating CI/CD processes.
- Optimized application architecture and load efficiency by identifying render bottlenecks via React Profiler, reducing bundle size by 30-40% and delivering a 35% faster load time.
- Enhanced the development workflow by introducing automated testing frameworks (**Jest** and Enzyme), leading to a 20% decrease in bug reports and fostering a culture of maintainable code.

Founders Lair Beijing, China (Remote)
Full Stack Engineer (Contract) *Oct 2020 - Feb 2021*

- Architected and developed robust **Node.js** RESTful APIs, employing clean architecture principles to deliver highly testable, maintainable, and well-documented backend services.
- Exercised strong product ownership by translating complex business requirements into efficient **MongoDB** database models, collaborating directly with stakeholders to ensure technical solutions perfectly aligned with business objectives.

- Engineered automated **CI/CD pipelines** for seamless deployment to Heroku and **AWS**, establishing reliable infrastructure and accelerating the release cycle.
- Bridged design and engineering by transforming user journeys and Figma mockups into reusable **React** components, applying component-driven design principles to guarantee a consistent, intuitive user interface.

SureTrade Business Solutions Nigeria

Frontend Developer *Mar 2018 - Oct 2019*

- Led the architectural design of **MongoDB** database schemas and implemented robust server-side logic in **Node.js**, delivering scalable foundations for multiple client-facing applications.
- Took end-to-end ownership of critical business modules, building and testing REST API endpoints for user management, payroll processing, and attendance tracking.
- Drove full-stack integration by seamlessly connecting the JavaScript frontend to **Node.js** backend services, ensuring cohesive data flow and optimal system performance.
- Established a culture of maintainability by devising comprehensive technical documentation, detailing system architecture, API capabilities, and feature specifications.

PROJECTS

OurNigeria ournigeria.ng

Senior Engineer *Feb 2026 - Present*

AI-powered platform for Nigerian budget analysis and corruption tracking.

- Architected and built the entire platform as an Nx monorepo managing 6 applications, including a **NestJS (Node.js)** API backend, a **Next.js** citizen-facing web app, and a NestJS document ingestion pipeline.
- Designed the PostgreSQL 16 database schema with Prisma v7, managing 700+ documents and complex data relationships with zero ingestion errors.
- Configured **CI/CD** with **GitHub Actions** for automated builds, Playwright end-to-end tests, and **Docker** Compose production deployment with multi-stage Dockerfiles and health checks.
- Built the **Next.js** frontend with **React** 19 and Tailwind CSS, featuring URL state management and responsive layouts.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science, 4.1 CGPA *Graduation Date: Sep 2019*
