Hiring Team
XO Life GmbH
Agnes-Pockels-Bogen 1
80992 Munich, Germany

Dear Hiring Team,

I am writing to apply for the Full Stack AI Engineer position at XO Life. As a software engineer with 8 years of product development experience, I am deeply drawn to the brite platform's mission of connecting patients, healthcare representatives, and pharmaceutical manufacturers in a single digital ecosystem. My background in building secure, scalable healthcare platforms and integrating complex AI workflows aligns perfectly with your goal of bringing intelligent, cross-platform features to the digital health space.

In my current role as a Frontend Engineer (React / AI Integration) at Genentech (Roche), I spearheaded the redesign of a critical clinical trial data product, migrating it to a React-based architecture that optimized workflows for clinical site integrations. Additionally, I co-developed a full-stack Next.js chat widget powered by a Retrieval-Augmented Generation (RAG) system using OpenAI GPT models, LangChain, and Chroma. This allowed users to query their data in real time via a conversational interface. I also implemented secure JWT-based authentication and role-based access control, ensuring that sensitive healthcare data remained protected.

My experience extends across the full stack. As a Senior Engineer on the OurNigeria platform, I architected an Nx monorepo managing a NestJS (NodeJS) API backend and a Next.js citizen-facing web app. I designed a multi-agent AI system using the Mastra framework and built a hybrid RAG pipeline with pgvector. To support real-time interactions, I implemented Server-Sent Events (SSE) streaming with keepalive heartbeats, similar to the WebSocket real-time features required at XO Life. Furthermore, I configured the entire CI/CD pipeline using GitHub Actions and deployed the cloud-native infrastructure via Docker Compose.

Whether it is reducing bundle sizes by 30-40% as a Senior Frontend Developer at Descasio or building high-volume backend systems at ActivEdge Technologies, I consistently focus on delivering performant, user-centric applications. I am excited about the opportunity to bring my expertise in React, NodeJS, and AI integration to the brite platform and help scale your digital health ecosystem.

Thank you for considering my application. I would welcome the opportunity to discuss how my technical background and product-driven mindset can contribute to the engineering team at XO Life.

Sincerely,

Ogbonna Arinze
