Hiring Manager
idealo internet GmbH
Berlin, Germany

Re: Full Stack Engineer (NestJS/React/AWS) — Product Enrichment

Dear Hiring Manager,

I am writing to express my strong interest in the Full Stack Engineer position on idealo's Product Enrichment team. With over eight years of experience building scalable, data-intensive web applications using React, Next.js, Node.js, TypeScript, and AWS, I am excited by the opportunity to contribute to one of Europe's leading price comparison platforms and help enrich the massive product catalogue that millions of users depend on.

In my current role at Roche Genentech, I architected a full-stack platform for a clinical trial data system, designing a reusable React design system backed by Node.js APIs that improved developer efficiency across multiple products. Most relevant to idealo's Product Enrichment mission, I engineered a data enrichment pipeline that transformed a legacy application into a modern ReactJS Chrome extension with backend service integrations, optimizing data processing workflows and driving adoption across teams. I also increased release reliability by integrating Playwright end-to-end tests into our CI/CD pipeline via GitHub Actions, providing real-time build quality visibility on every push—exactly the kind of agile, short-release-cycle discipline that idealo values.

Previously at DESCASIO, I owned the core architecture for a data-heavy React dashboard backed by Node.js services, implementing virtualization and efficient state management to handle large datasets seamlessly—experience directly transferable to managing idealo's extensive product catalogues. I reduced bundle sizes by 30–40% and achieved 35% faster load times through systematic performance profiling, while establishing engineering standards for code quality and deployment automation using GitHub Actions. I am particularly drawn to idealo's collaborative engineering culture; pair programming, code reviews, and mentoring junior developers have been central to my approach throughout my career.

What excites me most about this role is the intersection of large-scale data systems and user-facing product development. The challenge of enriching hundreds of millions of products using technologies like NestJS, React, Kafka Streams, and AWS aligns perfectly with my passion for building robust, data-driven applications. I would welcome the opportunity to discuss how my experience can contribute to idealo's Product Enrichment team.

Sincerely,

Ogbonna Arinze
