SUMMARY

Full Stack Engineer with 8+ years of experience building high-impact, scalable web applications across large-scale, data-intensive platforms. Proven expertise in architecting end-to-end systems using **NestJS**, **React/Next.js**, **TypeScript**, and **AWS**, with deep experience in event-driven architectures, **database design**, and CI/CD automation. Adept at owning the complete technical lifecycle from specification through deployment, driving engineering excellence through **clean code**, robust **design patterns**, and automated testing in **agile**, short-release-cycle environments.

CORE COMPETENCIES

Full Stack Development: NestJS, Next.js, React, Node.js, TypeScript, JavaScript, Python, and end-to-end feature delivery from API to UI.

Cloud & Infrastructure: AWS (EC2, S3, CloudFront, Lambda, SQS, ECS), Docker, Vercel, edge rendering, and serverless architectures.

Databases & Data Pipelines: MySQL, MongoDB, PostgreSQL, Apache Kafka, Kafka Streams, event-driven streaming, and large-scale data processing.

AI & ML Integration: LLM API integration, AI-powered feature development, and intelligent data enrichment pipelines.

CI/CD & DevOps: GitHub Actions, automated testing pipelines, Docker-based deployments, feature flags, and canary release strategies.

Frontend Architecture: Scalable component systems, design systems, SSR/SSG, Redux, React Query, accessibility (WCAG), and Core Web Vitals optimization.

Quality & Reliability: Jest, Playwright, Cypress, TDD/BDD, visual regression testing, and end-to-end test automation.

Methodologies & Collaboration: Agile/Scrum, pair programming, code reviews, architecture reviews, mentorship, and technical direction.

WORK EXPERIENCE

Roche Genentech San Francisco, CA (Remote)

Full Stack Software Engineer (React/Node.js) *May 2023 - Present*

- **Architected** the full-stack platform for a clinical trial data system, designing a reusable **design system** in **ReactJS** and **Radix UI** backed by **Node.js** APIs, improving consistency, accessibility, and developer efficiency across multiple products.
- **Engineered** a **data enrichment pipeline** that transformed a legacy Vue.js application into a **ReactJS Chrome extension** with backend service integrations, optimizing workflows for clinical site data processing and enhancing adoption across teams.
- **Optimized** application performance in a **TypeScript**-based full-stack application by implementing lazy loading, code splitting, dynamic imports, and efficient **CDN asset delivery** via **AWS CloudFront/S3**, reducing load times significantly using **Lighthouse** and **Chrome DevTools** profiling.
- **Developed JWT-based authentication** and role-based access control in a **Next.js** frontend with **TypeScript** and **React Query**, using HTTP-only cookies for secure token handling and collaborating with backend teams on **REST API** design for permission-based UI rendering.
- **Scaled** state management in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, cutting redundant re-renders and accelerating developer onboarding through consistent, maintainable **design patterns**.
- **Increased** release reliability by integrating **Playwright end-to-end tests** into the **CI/CD pipeline** via **GitHub Actions**, automating test reporting with Allure Reports and configuring Slack notifications for real-time build quality visibility on every push.

DESCASIO LTD Lagos, Nigeria

Staff Full Stack Engineer *May 2021 - Apr 2022*

- **Owned** the core architecture for a **data-heavy React dashboard** backed by **Node.js** services, implementing virtualization and efficient state management to handle **large datasets** seamlessly across a high-traffic, data-driven platform.
- **Optimized** application performance by identifying and resolving render bottlenecks using React Profiler and Lighthouse Audits, reducing bundle size by **30%–40%** through rollup-plugin-visualizer and webpack-bundle-analyzer, achieving a **35% faster load time** and smoother runtime experience across devices.
- **Established** engineering standards for **code quality**, testing, and **deployment automation** across the team using ESLint, Prettier, Husky, Lint-staged, and **GitHub Actions**, reducing errors and accelerating **CI/CD processes**.
- **Mentored** junior engineers and guided full-stack best practices through **pair programming** and **code reviews**, fostering a culture of high-quality, maintainable code and consistent design across projects.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
