Hiring Team
keylight
Berlin, Germany

Dear Hiring Team,

I am writing to express my strong interest in the Senior Frontend Engineer position at keylight. With 8+ years of experience building reusable, modular component systems, crafting pixel-perfect CSS interfaces, and optimizing frontend performance across large-scale web applications, I am excited by the opportunity to contribute to the only user-centric, end-to-end subscription technology platform on the market.

At Roche Genentech, I developed a library of **reusable, modular frontend components** in React.js and TypeScript with advanced **CSS3** styling, building a design system that improved visual consistency and developer efficiency across multiple products. I implemented **responsive design** using fluid grids, media queries, and accessible UI primitives to ensure seamless experiences across desktop, tablet, and mobile devices. To address performance, I **reduced initial load times by over 40%** through lazy loading, code splitting, and systematic bottleneck profiling with Lighthouse and Chrome DevTools — exactly the kind of frontend optimization keylight's platform demands at scale. I also scaled state management using **reactive, observable patterns** and collaborated closely with backend developers to integrate frontend components with APIs and services.

At DESCASIO, I owned the frontend architecture for a data-heavy React dashboard, reducing bundle size by **30–40%** through **Webpack** analysis tooling and achieving a **35% faster load time**. I established engineering standards with ESLint, Prettier, and GitHub Actions CI/CD, and mentored junior engineers on component-based architecture and code quality — reflecting the accountability and continuous learning that define keylight's culture. I thrive in calm, collaborative environments where constructive communication and detail-oriented craftsmanship drive meaningful product outcomes.

I would welcome the opportunity to discuss how my deep expertise in **CSS, TypeScript, reactive frameworks, Webpack**, and **responsive design** can help keylight continue to deliver high-quality, scalable frontend experiences for its global subscription platform.

Best regards,

Ogbonna Arinze
