Hiring Team
mula
Berlin, Germany

Dear Hiring Team,

I am writing to express my strong interest in the Senior Frontend Engineer position at mula. As a senior engineer with 8+ years of experience leading frontend architecture in **React**, **Next.js**, and **TypeScript**, I am excited by the opportunity to own mula's frontend codebase and help build the world's most integrated merchandise platform. The chance to be the primary authority for frontend architecture - shaping scalable, intuitive B2B experiences that bridge complex backend logic with seamless user journeys - is exactly the kind of challenge I thrive on.

At Roche Genentech, I led frontend architecture for a clinical data platform, designing a **reusable design system** in React and TypeScript that improved consistency and developer efficiency across multiple products. I scaled state management in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, cutting redundant re-renders and streamlining data flow - directly mirroring the state management expertise mula requires. I also implemented **JWT-based authentication with role-based access control**, collaborating closely with backend teams to define API contracts and enforce permission-based UI rendering, achieving a smooth full-stack integration.

On the performance and quality front, I reduced load times significantly through **code splitting, lazy loading, and caching strategies**, profiling bottlenecks with Lighthouse and Chrome DevTools. At DESCASIO, I owned the core frontend architecture for a data-heavy React dashboard, reducing bundle size by **30-40%** and achieving a **35% faster load time**. I established engineering standards with ESLint, Prettier, and **CI/CD pipelines via GitHub Actions**, and integrated **Playwright end-to-end tests** to ensure release reliability - the kind of quality-first mindset that keeps a B2B platform fast, reliable, and maintainable.

I would welcome the opportunity to discuss how my deep expertise in the React ecosystem, Next.js rendering strategies (SSR, SSG, ISR), and collaborative full-stack integration can help mula deliver a high-performance digital experience for its customers.

Best regards,

Ogbonna Arinze
