SUMMARY

Senior Frontend Engineer with 8+ years of experience building high-performance, scalable web applications using **React, Next.js, and TypeScript**. Proven track record of owning entire frontend codebases and defining frontend architecture for B2B platforms, including designing **scalable component systems**, implementing advanced **state management** with **Redux** and **React Query**, and delivering **pixel-perfect, responsive, and accessible** interfaces. Skilled at collaborating closely with backend engineers to define **API contracts** and ensure seamless data flow, with hands-on experience integrating **RESTful APIs** in full-stack environments. Thrives in lean, agile teams where ownership and cross-functional collaboration drive product impact.

CORE COMPETENCIES

- **React Ecosystem:** React, Next.js (SSR, SSG, ISR), React Query, React Context, Redux, and component-driven architecture for scalable B2B applications.
- **TypeScript Mastery:** End-to-end type safety across the entire application, strict typing for API contracts, state management, and component props.
- **State Management:** Redux for complex client state, React Query for server-side data fetching and caching, React Context for shared UI state, and efficient data flow patterns.
- **Modern CSS & Responsive Design:** Styled Components, CSS Modules, Tailwind CSS, responsive layouts, and pixel-perfect implementation of design mockups.
- **Performance Optimization:** Code splitting, lazy loading, caching strategies, bundle analysis, memoization, Core Web Vitals tuning, and CDN asset delivery.
- **Testing & Quality:** Jest, React Testing Library, Cypress, Playwright, CI/CD pipelines (GitHub Actions), ESLint, Prettier, and automated release workflows.
- **API Integration:** RESTful API design and consumption, efficient data handling, error management, JWT authentication, and role-based access control.
- **Collaboration & Communication:** Cross-functional work with product, design, and backend teams, architecture documentation, Agile workflows, and mentorship.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Frontend Software Engineer (ReactJS) — *May 2023 - Present*

- Owned the **frontend architecture** for a clinical data platform, designing a reusable **design system** in **React** and **TypeScript** with accessible, **pixel-perfect UI components** built on Radix UI, improving consistency and developer efficiency across multiple products.
- Scaled **state management** in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, streamlining data flow, cutting redundant re-renders, and establishing maintainable patterns that accelerated developer onboarding.
- Optimized application **performance** in a **React** and **TypeScript** SPA by implementing **lazy loading, code splitting**, dynamic imports, and **caching strategies**, reducing load times by over 40% as measured by Lighthouse and Chrome DevTools profiling.
- Collaborated closely with **backend engineers** to define **API contracts** for **RESTful APIs**, implementing JWT-based authentication and role-based access control with **React Query** for efficient data fetching and **error management** across the frontend.
- Translated design mockups into **responsive, accessible interfaces** using **modern CSS** practices, ensuring cross-device consistency and a seamless user experience through Radix UI layouts and systematic design tokens.
- Increased release reliability by integrating **Playwright** and **Jest** end-to-end and unit tests into the **CI/CD pipeline**, automating test reporting and configuring Slack notifications for real-time build quality visibility.

DESCASIO LTD — Lagos, Nigeria
Staff Frontend Engineer — *May 2021 - Apr 2022*

- Took **full responsibility for the frontend codebase** of a data-heavy **React** dashboard, defining the technical direction of the client-side application, implementing virtualization and efficient **state management** to handle large datasets seamlessly.
- Optimized **frontend performance** by identifying and resolving render bottlenecks using React Profiler and Lighthouse Audits, reducing **bundle size by 30-40%** through **code splitting** and bundle analysis, achieving a **35% faster load time** across devices.
- Established **frontend best practices** and engineering standards for **code quality, testing, and CI/CD** using ESLint, Prettier, Husky, Lint-staged, and **GitHub Actions**, creating a clean, modular codebase with thorough documentation.
- Mentored junior engineers and guided **cross-functional collaboration** with product and design teams, translating requirements into technical solutions while clearly communicating architectural decisions to non-technical stakeholders.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
