SUMMARY

Senior Frontend Engineer with 8+ years of experience building high-performance, data-intensive dashboards and developer-facing interfaces using **React, TypeScript, and Tailwind CSS**. Proven track record of owning frontend architecture end to end, from information architecture and interaction design to rendering performance and polish, in fast-paced, product-led environments. Skilled at building scalable, accessible UI component systems and collaborating with backend teams (Node.js/TypeScript) to ship features autonomously. Passionate about developer tools, obsessive about UI craft, and startup-ready with a strong ownership mindset.

CORE COMPETENCIES

- **Core Stack:** React, TypeScript, Tailwind CSS, Next.js, and modern JavaScript (ESNext) for building best-in-class developer-facing UIs.
- **Data-Intensive UIs:** Virtual rendering, efficient state management (Redux, React Query), large dataset handling, and complex dashboard views (logs, syncs, connection management).
- **Frontend Performance:** Memoization, lazy loading, code splitting, bundle analysis (Webpack/Vite/Rollup), CDN strategies, Core Web Vitals, and Chrome DevTools profiling.
- **UI/UX Craft:** Design systems, accessible component libraries (Radix UI, WCAG), Figma-to-code workflows, polished interaction details, loading states, and edge-case handling.
- **Backend Familiarity:** Node.js, TypeScript, REST APIs, GraphQL, JWT authentication, and database fundamentals, enough to be autonomous and self-sufficient.
- **Quality & DevOps:** Playwright and Jest testing, CI/CD pipelines (GitHub Actions), Storybook, ESLint, and automated release strategies.
- **Observability:** Sentry, Datadog RUM, LogRocket, Lighthouse audits, synthetic monitoring, and deep frontend profiling.
- **Collaboration:** Remote-first communication, cross-functional product collaboration, architecture reviews, mentorship, and developer experience advocacy.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Frontend Software Engineer (ReactJS) — *May 2023 - Present*

- Architected the **frontend design system** for a clinical trial data platform in **React** and **TypeScript**, building reusable, **accessible UI components** with **Radix UI** and **Tailwind CSS** that improved visual consistency and developer efficiency across multiple products.
- Designed and implemented **data-intensive dashboard views** for managing clinical data at scale, optimizing **rendering performance** through **memoization**, **lazy loading**, code splitting, and dynamic imports, reducing initial load times by over 40% as measured by **Lighthouse** and Chrome DevTools profiling.
- Owned **frontend performance** end to end: minimized **bundle size**, optimized CDN asset delivery, and ensured the UI felt instant across devices by eliminating render bottlenecks and tuning **Core Web Vitals** scores.
- Scaled **state management** in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, cutting redundant re-renders and establishing scalable, maintainable patterns that accelerated developer onboarding.
- Collaborated directly with **backend teams (Node.js/TypeScript)** to implement JWT-based authentication, role-based access control, and permission-based UI rendering, shipping features end to end with high autonomy.
- Increased release reliability by integrating **Playwright end-to-end tests** into the **CI/CD pipeline**, automating test reporting with Allure Reports and configuring Slack notifications for real-time build quality visibility.

DESCASIO LTD — Lagos, Nigeria
Staff Frontend Engineer — *May 2021 - Apr 2022*

- **Owned the entire frontend** for a **data-heavy React dashboard**, implementing **virtual rendering** and efficient state management to handle large datasets seamlessly, including performant views for logs, syncs, and connection

management at scale.

- Optimized **frontend performance** by identifying and resolving render bottlenecks using **React Profiler** and Lighthouse Audits, reducing **bundle size by 30-40%** through rollup-plugin-visualizer and **webpack-bundle-analyzer**, achieving a **35% faster load time** and smoother runtime experience.
- **Established scalable frontend patterns** and engineering standards for code quality, testing, and deployment using ESLint, Prettier, Husky, Lint-staged, and **GitHub Actions**, reducing errors and accelerating CI/CD processes across the team.
- **Mentored** junior engineers and shaped frontend best practices, fostering a culture of high-quality, maintainable code and consistent design, demonstrating the proactive, low-ego leadership needed in a small, high-impact team.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
