Hiring Manager
ONIQ GmbH
Berlin, Germany

Re: Frontend Software Developer (TypeScript/React)

Dear Hiring Manager,

I am writing to express my strong interest in the Frontend Software Developer position at ONIQ. With over eight years of experience building high-performance, data-intensive web applications using React, TypeScript, and modern frontend tooling, I am excited by the opportunity to help transform manufacturing through ONIQ's IQA Lean Copilot — combining lean production principles with AI and advanced data analytics to drive sustainable, efficient operations at scale.

In my current role at Roche Genentech, I lead frontend architecture for a clinical trial data platform — a complex, data-intensive SaaS application that closely mirrors the analytical workflows ONIQ builds for manufacturing customers. I designed a reusable React and TypeScript design system that improved consistency and developer efficiency across multiple products, and I optimized application performance through lazy loading, code splitting, and memoization strategies that significantly reduced load times for data-heavy views. I also integrated Playwright and Jest-based testing into our CI/CD pipeline, providing real-time build quality visibility — the kind of testing discipline and DevOps practice that aligns with ONIQ's self-managed, agile development culture.

Previously at DESCASIO, I owned the core frontend architecture for a data-heavy React dashboard, implementing virtualization and efficient state management to render large datasets seamlessly — experience directly transferable to building ONIQ's production data visualizations. I reduced bundle sizes by 30–40% and achieved 35% faster load times through systematic performance profiling with React Profiler and Lighthouse, while establishing engineering standards using ESLint, Prettier, Storybook, and GitHub Actions. I actively leverage AI-assisted development tools like GitHub Copilot and Claude in my daily workflow, and I am passionate about using these tools to accelerate development velocity while maintaining code quality.

What excites me most about ONIQ is the mission to make manufacturing more sustainable and efficient. The challenge of creating intuitive analysis workflows that surface actionable insights from complex production data — and delivering a great UX to enterprise customers — is exactly where my experience and passion intersect. I would welcome the opportunity to discuss how I can contribute to the ONIQ development team and help shape the future of digital lean manufacturing.

Sincerely,

Ogbonna Arinze
