SUMMARY

Senior Frontend Engineer with 8+ years of experience architecting and scaling high-performance web applications serving millions of users using React.js, TypeScript, and modern state management patterns including the observer pattern. Proven ability to own features end-to-end across cross-functional teams, delivering fast, responsive user interfaces with a focus on rendering speed, runtime efficiency, and pragmatic iteration. Experienced with TailwindCSS, Vite, Turborepo, Playwright, and Canvas-based web APIs in monorepo environments, combining deep component-based architecture expertise with a passion for web performance optimization.

CORE COMPETENCIES

- **Frontend Architecture:** Scalable component-based systems, React.js, TypeScript, monorepos (Turborepo), design systems, and SSR/SSG strategies.
- **State Management:** MobX observer pattern, Redux, React Query, and reactive state architectures for complex, data-driven UIs.
- **Performance Engineering:** Rendering optimization, code splitting, lazy loading, Vite build pipelines, CDN strategies, and Core Web Vitals.
- **UI & Styling:** TailwindCSS, Canvas APIs, responsive design, accessibility (WCAG), Figma-to-code workflows, and cross-platform consistency.
- **Testing & Quality:** Playwright end-to-end testing, Jest, Vitest, CI-driven automated QA, and visual regression testing.
- **Tooling & Infra:** Vite, Webpack/Rollup, GitHub Actions CI/CD, Docker, Vercel, AWS CloudFront/S3, and edge rendering.
- **Collaboration & Ownership:** Cross-functional team integration, autonomous end-to-end delivery, Agile methodology, and pragmatic iteration.
- **API & Integration:** RESTful APIs, GraphQL, real-time APIs, JWT authentication, and backend service integration.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Frontend Software Engineer (React.js) — *May 2023 - Present*

- Architected the **frontend architecture** for a large-scale clinical data platform serving thousands of users, designing a **reusable component-based design system** in **React.js** and **TypeScript** that improved consistency, accessibility, and developer velocity across multiple products.
- **Optimized** web application performance in a **React.js** and **TypeScript** SPA by implementing **lazy loading, code splitting**, dynamic imports, and image optimization, reducing initial load times by over 40%. Profiled **rendering speed** and **runtime efficiency** using Lighthouse and Chrome DevTools to resolve bottlenecks and improve **Core Web Vitals**.
- Scaled **state management** in a large application by implementing **reactive, observable patterns** with Redux and React Query for complex client state and cached API data, cutting redundant re-renders and establishing maintainable patterns that accelerated developer onboarding across a growing team.
- **Owned features end-to-end** from design spec implementation to production release, collaborating with **cross-functional teams** (design, backend, product) to integrate frontend components with backend services, plan workload, communicate risks, and analyze product design complexity.
- Increased release reliability by integrating **Playwright end-to-end tests** into the **CI/CD pipeline**, automating test reporting with Allure Reports and configuring real-time **Slack notifications** for build quality visibility on every push.
- Engineered **JWT-based authentication** and role-based access control in a **Next.js** frontend with **TypeScript** and **React Query**, implementing HTTP-only cookies for secure token handling and permission-based UI rendering.

DESCASIO LTD — Lagos, Nigeria
Staff Frontend Engineer — *May 2021 - Apr 2022*

- **Owned** the core **frontend architecture** for a data-heavy **React.js** dashboard scaled to tens of thousands of concurrent users, implementing virtualization, **Canvas**-based rendering for data visualizations, and efficient **state management** to handle large datasets seamlessly.

- **Optimized** frontend **web performance** by identifying and resolving render bottlenecks using React Profiler and Lighthouse Audits, reducing bundle size by **30%-40%** through **Vite**-based build analysis tooling, achieving a **35% faster load time** and smoother runtime experience across devices.
- **Established** engineering standards for code quality, testing, and deployment across the team using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, reducing errors and accelerating CI/CD processes with **pragmatic, fast-iteration** workflows.
- **Mentored** junior engineers and guided frontend best practices within a multicultural team, fostering a culture of high-quality, maintainable code and consistent **component-based design** across projects.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
