Hiring Manager
Akeno
Hamburg, Germany

Re: Senior/Staff Fullstack Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the Senior/Staff Fullstack Engineer position at Akeno. With over eight years of experience building high-impact, data-intensive web applications using React, TypeScript, Node.js, and GraphQL, I am drawn to the opportunity to help chemical manufacturers optimize production planning through state-of-the-art software. Having reviewed your Tech Radar, I am particularly impressed by your commitment to engineering transparency and your thoughtful technology choices—it signals the kind of team that cares deeply about getting things right, not just fast.

In my current role at Roche Genentech, I architected a full-stack clinical trial data platform, designing a reusable React and TypeScript design system backed by Node.js APIs and GraphQL data layers that improved developer efficiency and consistency across multiple products. I delivered features end-to-end—from frontend UI through API integration to database queries—which mirrors Akeno's expectation of true full-stack ownership. I also increased release reliability by integrating Playwright and Cypress end-to-end tests into the CI/CD pipeline with automated reporting on every push, ensuring issues were detected before they ever reached users. This testing-first discipline aligns directly with Akeno's culture of proactive monitoring and quality assurance.

Previously at DESCASIO, I owned the core architecture for a data-heavy React dashboard, implementing virtualization and efficient state management to handle large, complex datasets seamlessly—experience directly transferable to the industrial-scale data challenges at Akeno. I reduced bundle sizes by 30–40% and achieved 35% faster load times through systematic profiling, while establishing engineering standards for code quality and deployment automation across the team. I also appreciate that Akeno has invested in a fully local "Airplane mode" development environment and pseudonymized database dumps; having championed developer experience improvements throughout my career, I understand the outsized impact these investments have on development velocity.

What excites me most about Akeno is the opportunity to work on deep industrial B2B software with a small, high-caliber team where senior engineers are expected to lead, not just execute. The challenge of making enterprise software truly self-service ready—while delivering elegant, simple solutions through constructive collaboration—is exactly where I thrive. I would welcome the opportunity to discuss how my full-stack experience and product-driven mindset can contribute to Akeno's mission.

Sincerely,

Ogbonna Arinze
