SUMMARY

Senior Full Stack Engineer with 8+ years of experience delivering end-to-end features in long-term product environments, from **React** frontends through **Node.js** backends down to **PostgreSQL** databases. Proven expertise in **TypeScript**, **GraphQL**, **automated testing** (Jest, Cypress, Playwright), and **Docker**-based development workflows. Adept at leading major feature increments, establishing engineering standards, and driving developer experience improvements in collaborative, high-caliber teams. Strong background in building **data-heavy applications** with clean code, robust **design patterns**, and a focus on elegant, simple solutions.

CORE COMPETENCIES

Full Stack Development: React, Next.js, Node.js, TypeScript, JavaScript, Python, and end-to-end feature delivery from UX through API to database.

Databases & APIs: PostgreSQL, MySQL, MongoDB, GraphQL, REST, React Query, and efficient data modeling for complex domain systems.

Frontend & CSS: React component architecture, TailwindCSS, Radix UI, Storybook, design systems, flexbox/grid layouts, accessibility (WCAG), and responsive styling.

Testing & Quality: Jest, Cypress, Playwright, TDD/BDD, end-to-end testing, integration testing, visual regression testing, and CI-driven QA.

DevOps & Infrastructure: Docker, AWS (CloudFront, S3, Lambda, ECS), CI/CD pipelines (GitHub Actions), Vercel, and containerized development environments.

AI Integration: LLM API integration, AI-powered feature development, and intelligent recommendation systems.

Architecture & DX: Clean code, design patterns, event-driven architectures, monorepo tooling, build optimization (Webpack/Vite), and developer experience improvements.

Leadership & Collaboration: Leading feature increments, architecture discussions, pair programming, code reviews, mentorship, and Agile product development.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)

Senior Full Stack Engineer (React/Node.js/TypeScript) — *May 2023 - Present*

- **Architected** the full-stack platform for a clinical trial data product, designing a reusable **design system** in **React** and **Radix UI** backed by **Node.js** APIs, improving consistency, accessibility, and developer efficiency across multiple products in a **long-term product development** environment.
- **Delivered** end-to-end feature increments from **UX design** through frontend implementation to backend integration, transforming a legacy Vue.js application into a modern **React** Chrome extension with **TypeScript**, optimizing workflows and driving adoption across teams.
- **Optimized** application performance in a **TypeScript**-based full-stack application by implementing lazy loading, code splitting, and efficient **CDN asset delivery**, reducing load times significantly using **Lighthouse** and Chrome DevTools profiling to detect issues before users ever did.
- **Developed JWT-based authentication** and role-based access control in a **Next.js** frontend with **React Query** for cached **API data**, collaborating with backend teams on **REST API** design and implementing permission-based UI rendering with **TypeScript**.
- **Scaled** state management in a large **React/Next.js** application by integrating **Redux** for complex client state and **React Query** for server-state synchronization, cutting redundant re-renders and improving **developer experience** through consistent, maintainable patterns.
- **Increased** release reliability by integrating **Playwright** and **Jest** tests into the **CI/CD pipeline** via **GitHub Actions**, automating test reporting and providing real-time build quality visibility—creating **monitoring & testing** that detected issues before customers did.

DESCASIO LTD — Lagos, Nigeria

Staff Full Stack Engineer *May 2021 - Apr 2022*

- **Owned** the full-stack architecture for a **data-heavy React dashboard** backed by **Node.js** services and **PostgreSQL**, implementing virtualization and efficient state management to handle **large datasets** seamlessly across a complex domain application.
- **Optimized** application performance by identifying and resolving render bottlenecks using React Profiler and **Lighthouse**, reducing bundle size by **30%–40%** through build analysis tooling, achieving a **35% faster load time** and continuously improving **DX** for faster development cycles.
- **Established** engineering standards for **code quality**, **automated testing**, and deployment across the team using ESLint, Prettier, Husky, Lint-staged, and **GitHub Actions**, reducing bugs in a way that they never happened again and accelerating **CI/CD processes**.
- **Led** projects and mentored junior engineers through **pair programming** and **constructive code reviews**, fostering a culture of high-quality, maintainable code and **elegant, simple solutions** across the team.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
