Hiring Team
Superhuman
San Francisco, CA (Remote)

Dear Hiring Team,

I am excited to apply for the Software Engineer (Frontend) position at Superhuman. As a Senior Frontend Engineer with 8+ years of experience shipping **React** and **TypeScript** applications at scale, I am deeply drawn to Superhuman's mission to unlock superhuman potential in everyone. The opportunity to craft super-refined, elegant interfaces that reach over **40 million daily active users** across productivity tools like Grammarly, Coda, Mail, and Go is exactly the kind of high-impact, user-centric work I thrive on.

At **Roche Genentech**, I led the frontend architecture for a clinical trial data platform serving thousands of users, designing a **reusable component system in React and TypeScript** with Radix UI that improved consistency, accessibility, and developer velocity across multiple products. I scaled state management in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, cutting redundant re-renders and accelerating developer onboarding through clean, maintainable patterns — the kind of technical excellence that directly translates to building polished interfaces for Superhuman's suite of apps.

I also bring deep experience in **performance engineering and CI/CD**, both critical for shipping reliably at Superhuman's scale. I optimized a React and TypeScript SPA through code splitting, lazy loading, and memoization, using **Lighthouse and Chrome DevTools** to identify and resolve bottlenecks. At DESCASIO, I reduced bundle size by **30–40%** and achieved **35% faster load times** for a data-heavy dashboard handling large datasets with virtualization. To ensure release confidence, I integrated **Playwright end-to-end tests** into the CI/CD pipeline with automated reporting and Slack notifications, providing real-time visibility into build quality on every push.

Beyond code, I am passionate about contributing to engineering culture — establishing team standards with ESLint, Prettier, and GitHub Actions, mentoring engineers, and driving best practices. I would welcome the opportunity to discuss how my expertise in React, TypeScript, and building elegant, high-performance interfaces can help Superhuman deliver delightful product experiences to millions.

Best regards,

Ogbonna Arinze
