Hiring Manager
velio (Bike Hub GmbH)
Cologne, Germany

Dear Hiring Team,

I am writing to express my strong interest in the Frontend Engineer (React) position at velio. As a Senior Frontend Engineer with over 8 years of experience building high-performance, user-centric web applications using React, Next.js, TypeScript, and Redux, I am excited by the opportunity to help shape velio's customer experience from the ground up. The chance to build a brilliant B2C platform for cycling enthusiasts at an early-stage, remote-first company aligns perfectly with both my technical strengths and my drive to create products that users love.

Throughout my career, I have consistently delivered frontend experiences that prioritize performance, polish, and scalability. At Roche Genentech, I led the frontend architecture for a data-intensive platform, designing a reusable component system with React and Radix UI that improved consistency and developer efficiency across multiple products. I also scaled state management in a large Next.js application by integrating Redux for complex client state alongside React Query for cached API data, cutting redundant re-renders and establishing maintainable patterns that accelerated team onboarding. This hands-on experience architecting React and Next.js applications with Redux directly mirrors the technical foundation velio is building on.

I bring a deep obsession with frontend performance and pixel-level quality. At Descasio, I owned the core frontend architecture for a data-heavy React dashboard, reducing bundle size by 30-40% and achieving 35% faster load times through systematic profiling with React Profiler and Lighthouse. I am experienced in creating smooth, responsive interfaces with meticulous attention to detail, from animation timing to layout precision. Combined with my experience working autonomously in fast-moving environments, establishing engineering standards from scratch, and mentoring teammates on frontend best practices, I am confident I can make an immediate and lasting impact at velio.

I am genuinely enthusiastic about velio's mission to build exceptional customer journeys in the cycling and mobility space. The opportunity to contribute to a product being shaped from the ground up, where my ideas and technical expertise can directly influence the platform's direction, is exactly the kind of challenge I thrive on. I would welcome the chance to discuss how my experience can help velio deliver a world-class frontend experience.

Thank you for your time and consideration.

Warm regards,
Ogbonna Arinze
