Hiring Team
Verve Retail Media
Germany (Remote)

Dear Hiring Team,

I am writing to express my enthusiasm for the Frontend Engineer position at Verve Retail Media. With 8+ years of experience building high-impact web applications using **React**, **Next.js**, and **TypeScript**, I am drawn to the opportunity to own the end-to-end implementation of Verve's Retail Media Platform. The challenge of bridging complex ad-tech requirements with human-centric design across 2,200+ stores and partnerships with brands like Unilever and Nestlé is exactly the kind of work I find most rewarding.

Your tech stack reads like my daily toolkit. At Roche Genentech, I architected frontend systems in **Next.js with TypeScript**, leveraging **React Query** for robust data fetching and caching — mirroring Verve's use of TanStack Query. I designed a **reusable design system** that improved consistency and developer efficiency across products, much like the design system leadership this role demands. I also translated complex requirements into intuitive interfaces, collaborating closely with UX designers, product managers, and backend engineers to deliver pixel-perfect, production-ready experiences from **Figma** mockups.

On the performance side, I optimized a large-scale React and TypeScript SPA through **code splitting, lazy loading, and CDN-optimized asset delivery**, profiling bottlenecks with Lighthouse and Chrome DevTools. At DESCASIO, I reduced bundle size by **30–40%** and achieved **35% faster load times** for a data-heavy dashboard — the kind of performance engineering critical for delivering a seamless experience across desktop and smart-cart screens. I also integrated **Playwright end-to-end tests** into CI/CD pipelines via **GitHub Actions**, establishing the automated testing and continuous integration practices that drive release confidence.

I am also an active user of **GenAI tools** to accelerate development speed and code quality, aligning with Verve's forward-thinking approach. I would welcome the opportunity to discuss how my expertise in your exact stack — Next.js, Tailwind CSS, React Query, and component-driven design systems — can help Verve Retail Media deliver a platform that is as powerful as it is intuitive.

Best regards,

Ogbonna Arinze
