Hiring Manager
Beroe x nnamu GmbH
Berlin / Munich, Germany

Dear Hiring Manager,

I have been following Beroe's work in procurement intelligence and the development of the nnamu.negotiations platform. The integration of AI and game theory to create autonomous negotiation systems is a fascinating technical challenge. With 8 years of professional experience architecting scalable frontend applications and building AI-integrated conversational interfaces, I am excited to apply for the Senior Frontend Software Engineer position to help build and optimize the advanced features of your SaaS platform.

In my current role as a Frontend Engineer at Genentech, I architected the migration of a legacy Vue.js application to a modern React and TypeScript architecture. A key part of my work involved co-developing a full-stack Next.js chat widget powered by a RAG system and OpenAI APIs. This conversational UI allows users to query complex data in real time, directly aligning with your need for engineers who can build intuitive interfaces for AI-driven products. Additionally, I architected a reusable design system using React, Radix UI, and Tailwind CSS, ensuring strict adherence to WCAG accessibility standards and responsive design principles.

I also bring deep experience in performance optimization and automated testing, which are critical for a platform like nnamu.negotiations. As a Senior Frontend Developer at Descasio, I led the implementation of scalable frontend architectures that accelerated development by 30%. I optimized load efficiency by identifying render bottlenecks with React Profiler and reducing bundle size by 30-40% using Webpack bundle analyzer. To ensure code quality, I established automated testing frameworks using Jest and Enzyme, which decreased bug reports by 20%, and utilized Storybook for documenting modular React components.

Furthermore, my recent work on OurNigeria, an AI-powered platform built as an Nx monorepo managing 6 applications, demonstrates my ability to handle complex micro-frontend architectures and Next.js SSR implementations. I am highly comfortable with CI/CD pipelines, having configured automated Playwright end-to-end tests across multiple environments.

I am very drawn to Beroe x nnamu's hybrid work model and the progressive 4-day work week, which I believe fosters high-quality, focused engineering. I would welcome the opportunity to discuss how my background in React, Next.js, and AI-integrated frontends can contribute to the success of your autonomous negotiation platform.

Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
