Hiring Team
konfetti GmbH
Berlin, Germany

Dear Hiring Team,

I have been following konfetti's growth as a premier booking platform for local workshops and experiences. Building seamless, high-performance interfaces that connect thousands of providers with eager learners is a complex technical challenge. With 8 years of professional experience in frontend engineering, including deep expertise in Vue.js, modern JavaScript, and end-to-end application delivery, I am excited to apply for the Frontend Developer (Nuxt/Vue) position to help scale both your customer-facing applications and partner backoffice.

In my current role as a Frontend Engineer at Genentech, I maintained and extended a complex Vue.js codebase for a critical clinical trial data product, shipping features and resolving technical debt in a highly regulated environment. I am deeply familiar with the nuances of Vue's reactivity and component architecture. Furthermore, I have a strong track record of performance optimization. During my tenure as a Senior Frontend Developer at Descasio, I utilized Lighthouse and bundle analyzers to identify render bottlenecks, successfully reducing bundle sizes by 30-40% and achieving a 35% faster load time. I know how to ensure that heavy, data-rich applications remain fast and responsive for end users.

Your requirement for a developer who understands end-to-end development aligns perfectly with my background. I have consistently championed automated testing and continuous delivery. At Genentech, I increased system reliability by writing end-to-end tests with Playwright integrated directly into our GitHub Actions CI/CD pipeline. Previously, by introducing Jest and Enzyme testing frameworks, I helped drive a 20% decrease in bug reports. I believe that robust monitoring, utilizing tools like Datadog and Sentry, is just as critical as writing the code itself.

Finally, I am highly experienced with AI-assisted development tools and integrating LLMs into production workflows. I recently co-developed a full-stack chat widget powered by OpenAI's GPT models and LangChain at Genentech, and I architected a multi-agent AI system for OurNigeria. I leverage AI tools daily to accelerate development, improve code quality, and propose innovative technical solutions. I thrive in agile environments where proactive communication and critical thinking are valued, and I would love to bring this mindset to the engineering team at konfetti.

I would welcome the opportunity to discuss how my background in Vue.js, performance optimization, and AI-driven development can contribute to konfetti's continued success. Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
