Hiring Team
verkstedt GmbH
Berlin, Germany

Dear Hiring Team,

With 8 years of professional experience building high-performance web applications, I am excited to apply for the Senior JavaScript Developer position at verkstedt. Your focus on delivering pragmatic, scalable solutions in the digital healthcare space resonates strongly with my recent work. Having spent the last few years architecting complex frontend systems and robust Node.js backends for clinical data products, I am eager to bring my expertise in React, TypeScript, and modern tooling to your hybrid team in Berlin.

At Genentech (Roche), I spearheaded the redesign of our main clinical trial data product, migrating a legacy Vue.js application to a modern React architecture. A key part of this transformation was architecting a reusable component library and design system using React and Radix UI, which significantly improved UI consistency, accessibility, and developer efficiency across multiple product teams. I also optimized application performance by implementing lazy loading, code splitting, and image optimization, drastically reducing load times as measured by Lighthouse. Additionally, I co-developed a full-stack Next.js chat widget powered by a Retrieval-Augmented Generation (RAG) system, demonstrating my openness to integrating AI tools to solve complex user problems.

My approach to software engineering is deeply rooted in performance and reliability. As a Senior Frontend Developer at Descasio, I identified and resolved render bottlenecks using React Profiler and Lighthouse Audits, reducing bundle sizes by 30-40% and achieving a 35% faster load time. Beyond the frontend, I have extensive experience building backend services and CI/CD pipelines. At Founders Lair, I developed Node.js RESTful APIs and engineered a CI/CD pipeline for automated deployment to Heroku and AWS. More recently, I have configured GitHub Actions and Docker containerization for automated builds and testing with Playwright, ensuring high code quality and seamless deployments.

I thrive in environments that value pragmatic solutions over dogma, and I am confident that my blend of frontend architecture, backend Node.js development, and CI/CD expertise will make an immediate impact at verkstedt. I would welcome the opportunity to discuss how my background aligns with your engineering goals.

Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
