Paul Davies, Talent Partner
Distribusion
Berlin, Germany (Remote)

Dear Hiring Team,

I am writing to express my strong interest in the Senior Frontend Engineer role on Distribusion's eCommerce Solutions team. As a Senior Frontend Engineer with **8+ years of experience** building high-performance **React** and **TypeScript** applications at scale, I am excited by the opportunity to help shape the Online Booking Engine that connects millions of travelers to ground transportation across **70+ countries** through partners like Google Maps and Booking.com. Distribusion's 10x growth and mission to build the world's largest ground transportation marketplace is exactly the kind of ambitious, high-impact environment where I do my best work.

At **Roche Genentech**, I led the frontend architecture for a clinical trial data platform, designing a **reusable component system in React and TypeScript** with Radix UI that improved consistency, accessibility, and developer velocity across multiple products — the same kind of scalable architecture thinking that Distribusion's booking engine demands. I also scaled state management in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, cutting redundant re-renders and establishing maintainable patterns that accelerated onboarding for new engineers. This experience translates directly to delivering features and maintaining a codebase that serves high-traffic eCommerce flows.

I also bring the testing and performance expertise this role requires. I integrated **Playwright end-to-end tests** into the CI/CD pipeline with automated Allure Reports and Slack notifications, providing real-time build quality visibility on every push. I have hands-on experience with **Cypress** for frontend testing, and at DESCASIO I reduced bundle size by **30–40%** and achieved **35% faster load times** for a data-heavy React dashboard by resolving render bottlenecks with React Profiler and Lighthouse Audits. Beyond code, I have consistently **mentored junior engineers** and established team-wide standards using ESLint, Prettier, and GitHub Actions — fostering the culture of ownership and quality that Distribusion values.

I would welcome the opportunity to discuss how my expertise in React, TypeScript, frontend architecture, and testing can help Distribusion's eCommerce Solutions team continue to deliver world-class booking experiences at scale. Thank you for your consideration.

Best regards,

Ogbonna Arinze
