Hiring Team
eventfirst
Remote (CET)

Dear Hiring Team,

I am writing to express my strong interest in the Senior Fullstack Engineer role at eventfirst. As an engineer with **8+ years of experience** building production-grade web applications using **TypeScript, React, Next.js, and Tailwind**, combined with hands-on experience building **agentic workflows and LLM-powered systems**, I am drawn to the challenge of designing tools that let domain experts craft, test, and scale complex prompt chains. The fact that eventfirst is tackling knowledge representation and human-computer interaction, not just wrapping an API, tells me this is a genuinely hard problem, and that is exactly the kind of work I want to be doing.

At **Roche Genentech**, I led the frontend architecture for a clinical trial data platform, designing a **reusable component system in React and TypeScript** with Radix UI that improved consistency, accessibility, and developer velocity across products. I scaled state management in a large **Next.js** application by integrating Redux for complex client state and React Query for cached API data, cutting redundant re-renders and establishing maintainable patterns. I also built **JWT-based authentication with role-based access control**, working closely with backend teams on permission-based UI rendering. This full-stack ownership, from database concerns to pixel-level UX, directly mirrors what eventfirst needs from its early engineering team.

Beyond my core frontend work, I have built **agentic workflows using LangChain, Vercel AI SDK, and Mastra**, with practical experience in prompt engineering, embeddings, vector search, and retrieval-augmented generation. I have also worked with **Drizzle ORM, PostgreSQL, and Vercel** for deployment, matching your stack precisely. At **DESCASIO**, I thrived as a **Staff Frontend Engineer** in a high-autonomy environment, owning architecture decisions for data-heavy dashboards, reducing bundle size by **30–40%**, and mentoring junior engineers. I am comfortable navigating ambiguity and shaping product direction, not just executing tickets.

I would welcome the opportunity to discuss how my full-stack expertise, LLM systems experience, and product-minded approach can help eventfirst build the tools that will define how expert knowledge is captured and scaled. Thank you for your consideration.

Best regards,

Ogbonna Arinze
