SUMMARY

Full Stack Engineer with 8+ years of experience building high-performance web applications using React, TypeScript, NestJS, and Node.js, deployed on AWS infrastructure. Proven track record of architecting data-intensive platforms that process and enrich large-scale product datasets, integrating AI-powered features, and implementing event-driven architectures with streaming technologies. Adept at driving engineering quality through pair programming, rigorous code reviews, and robust CI/CD pipelines with GitHub Actions.

CORE COMPETENCIES

- **Full Stack Development:** NestJS, React, Next.js, TypeScript, Node.js, and Python for end-to-end application delivery.
- **Cloud & AWS Infrastructure:** AWS (CloudFront, S3, Lambda), Docker, Vercel, edge rendering, and infrastructure-as-code deployments.
- **Data & Streaming:** Kafka Streams, event-driven architectures, real-time data pipelines, and large-scale data processing.
- **Databases:** MySQL, MongoDB, query optimization, schema design, and data modeling for high-throughput applications.
- **AI & Product Enrichment:** Integration of foundational AI models for content enrichment, data classification, and automated product data quality improvement.
- **CI/CD & Quality:** GitHub Actions pipelines, automated testing (Jest, Cypress, Playwright), feature flags, and canary deployments.
- **Software Engineering Fundamentals:** Clean code, design patterns, algorithms, TDD/BDD, and SOLID principles.
- **API Design & Integration:** RESTful APIs, GraphQL, real-time APIs, JWT/OAuth authentication, and role-based access control.
- **Collaboration & Leadership:** Pair programming, code reviews, technical mentorship, Agile/Scrum, and architecture reviews.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Software Engineer (React / Node.js / AWS) — *May 2023 - Present*

- Architected a **reusable component library** in **React** and **TypeScript** with **Radix UI**, establishing a scalable design system that improved UI consistency, accessibility, and developer velocity across multiple product teams.
- Engineered **RESTful API integrations** and **server-side data processing** pipelines in **Node.js** and **TypeScript**, handling clinical trial datasets at scale while ensuring data quality and integrity through validation layers and automated enrichment workflows.
- Implemented **JWT-based authentication** and **role-based access control** in a **Next.js** fullstack application with **TypeScript** and **React Query**, using HTTP-only cookies for secure token handling and enforcing permission-based rendering across frontend and backend.
- Optimized application performance by implementing **lazy loading, code splitting, dynamic imports**, and **CDN asset delivery** on **AWS CloudFront/S3**, reducing load times significantly and improving Core Web Vitals scores measured via Lighthouse and Chrome DevTools.
- Scaled **state management** in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, streamlining data flow, eliminating redundant re-renders, and establishing maintainable patterns.
- Increased release reliability by integrating **Playwright end-to-end tests** into the **GitHub Actions CI/CD pipeline**, automating test reporting with Allure Reports and configuring real-time Slack notifications for build quality visibility on every push.

DESCASIO LTD — Lagos, Nigeria
Staff Software Engineer — *May 2021 - Apr 2022*

- Owned the **full stack architecture** for a data-heavy **React** dashboard backed by **Node.js** services, implementing virtualization and efficient state management to handle large-scale datasets with seamless real-time updates.
- Optimized **frontend and API performance** by profiling render bottlenecks with **React Profiler** and analyzing backend response times, reducing bundle size by **30%-40%** and achieving a **35% faster load time** across devices.
- Established engineering standards for **code quality, testing**, and deployment across the team using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, reducing production errors and accelerating CI/CD processes.
- Championed **pair programming** and **code review** practices, mentoring junior engineers on clean code principles, design patterns, and fullstack best practices, fostering a culture of high-quality, maintainable code.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
