Hiring Team
JetBrains
Munich, Germany

Dear Hiring Team,

I am writing to express my strong interest in the Senior Frontend Developer role on the TeamCity team at JetBrains. As a Senior Frontend Engineer with **8+ years of experience** building complex, performance-critical web applications using **React, TypeScript, and Redux**, I am drawn to the challenge of modernizing TeamCity's frontend architecture, improving real-time UI performance with large datasets, and shaping the user experience of a CI/CD platform trusted by over **30,000 organizations worldwide**. JetBrains' commitment to building tools that let developers focus on what really matters resonates deeply with how I approach my own work.

At **Roche Genentech**, I led the frontend architecture for a clinical trial data platform, designing a **reusable component system in React and TypeScript** with Radix UI that improved consistency, accessibility, and developer velocity across products. I scaled state management in a large application by integrating **Redux** for complex client state and **React Query** for cached API data, cutting redundant re-renders and establishing maintainable patterns that accelerated onboarding. I also transformed a **legacy Vue.js application into a React Chrome extension**, which mirrors the kind of legacy modernization and architectural evolution that TeamCity's frontend demands. These experiences map directly to your need for someone who can participate in architecture decisions, evolve the system over time, and maintain legacy code while building new capabilities.

I also bring the performance and testing expertise this role requires. At **DESCASIO**, I owned the frontend architecture for a **data-heavy React dashboard**, implementing virtualization and efficient state management to handle large datasets seamlessly, and reduced bundle size by **30–40%** to achieve **35% faster load times** using React Profiler, Lighthouse, and bundle analyzers. I have hands-on experience with **GraphQL**, real-time communication patterns, and I integrated **Playwright end-to-end tests** into CI/CD pipelines with automated reporting, providing real-time build quality visibility. Beyond code, I have partnered closely with UI/UX designers through Figma-to-code workflows and mentored engineers to foster a culture of ownership and high-quality, maintainable code.

I would welcome the opportunity to discuss how my expertise in React, TypeScript, Redux, performance optimization, and frontend architecture can contribute to TeamCity's next chapter. Thank you for your consideration.

Best regards,

Ogbonna Arinze
