Hiring Manager
Lightspeed Commerce
Berlin, Germany

Dear Hiring Manager,

I am writing to express my interest in the Senior Frontend Developer (React + AI Experience) position at Lightspeed Commerce, specifically on the Agent OC Squad. With 8+ years of experience building production-grade React and TypeScript applications, and hands-on expertise integrating generative AI capabilities into frontend products, I am excited about the opportunity to help shape intelligent automation at Lightspeed.

At Roche Genentech, I have been architecting and delivering AI-powered frontend interfaces by integrating LLM capabilities into a React and TypeScript clinical data platform. Using the Vercel AI SDK and LangChain, I built features including natural language data querying, automated report generation, and context-aware recommendations. I designed streaming UI components for real-time LLM responses using WebSockets and server-sent events, implementing token-by-token rendering with graceful error recovery. I also built agentic workflow interfaces handling long-running, multi-step AI operations, creating scalable React patterns for asynchronous agent interactions, progress indicators, and real-time status updates. This experience directly mirrors what the Agent OC Squad is building: bringing generative AI capabilities into the product while establishing the foundations and platform patterns that enable broader AI adoption.

Beyond AI integration, I bring deep expertise in the frontend fundamentals your team requires. I have architected reusable design systems using React and Radix UI, implemented RAG-based retrieval interfaces connected to vector search backends (Chroma, Pinecone, Weaviate), and optimized performance through virtualization, code splitting, and lazy loading, reducing load times by over 40%. I have scaled state management in large Next.js applications using Redux Toolkit and React Query, established CI/CD pipelines with Playwright end-to-end testing and Allure reporting, and mentored engineers on React performance patterns and TypeScript best practices.

What excites me most about Lightspeed is the chance to build AI features that deliver real value to merchants across your global commerce platform. I am drawn to a team that balances building customer-facing generative AI features with establishing the standards and tooling that scale AI adoption across the organization. Your mission of building communities through commerce, combined with the autonomy and inclusive culture you foster, makes this an ideal environment for the kind of impactful, ownership-driven work I thrive in.

I would welcome the opportunity to discuss how my experience building AI-powered frontend systems can contribute to the Agent OC Squad's mission. Thank you for your consideration.

Sincerely,

Ogbonna Arinze
