SUMMARY

Senior Frontend Engineer with 8+ years of experience building high-impact, accessible web applications and learning platforms using React, Next.js, TypeScript, and modern UI component systems. Proven expertise in architecting scalable design systems with Storybook and Tailwind CSS, implementing automated quality assurance through CI/CD pipelines with Jest, Cypress, and Playwright, and delivering responsive, WCAG-compliant interfaces. Passionate about education technology and experienced in collaborative, agile team environments, combining deep frontend architecture skills with Python familiarity and a commitment to engineering excellence on mission-driven platforms.

CORE COMPETENCIES

- **Frontend Frameworks:** React, Next.js (SSR/SSG/ISR), TypeScript, modern JavaScript (ESNext), and Vue.js for scalable, component-driven applications.
- **UI Component Systems:** Tailwind CSS, Radix UI, Storybook, custom design systems, and Figma-to-code workflows for consistent, reusable component libraries.
- **Responsive Design & Accessibility:** WCAG/ARIA compliance, cross-browser compatibility, mobile-first responsive layouts, and inclusive design patterns.
- **Automated Quality Assurance:** Jest, Cypress, Playwright, React Testing Library, visual regression testing, Allure Reports, and CI-driven QA pipelines.
- **CI/CD & DevOps:** Docker, GitHub Actions, GitLab CI/CD, automated builds, deployments, and release strategies with feature flags and canary deploys.
- **Performance & Monitoring:** Core Web Vitals, Lighthouse audits, Sentry, Datadog RUM, LogRocket, code splitting, lazy loading, and CDN optimization.
- **Backend & APIs:** Python, REST APIs, GraphQL, JWT authentication, role-based access control, and real-time data integration.
- **Leadership & Collaboration:** Agile/Scrum, Jira, Confluence, technical mentorship, architecture reviews, and cross-functional team collaboration.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)

Frontend Software Engineer (React / Next.js) — *May 2023 - Present*

- Architected a **reusable design system** in **React** and **Radix UI** with full **Storybook** documentation, establishing a scalable component library that improved UI consistency, **accessibility**, and developer velocity across multiple product teams.
- Developed and maintained complex **Next.js** and **React** applications using **TypeScript**, delivering responsive, pixel-perfect interfaces with **Tailwind CSS** that adhered to **WCAG accessibility standards** across all devices and screen sizes.
- Optimized application performance in a **React** and **TypeScript** SPA by implementing **lazy loading, code splitting, dynamic imports**, and image optimization, reducing load times significantly and improving **Core Web Vitals** scores measured via **Lighthouse**.
- Enhanced responsiveness and runtime efficiency using memoization, virtualized lists, and efficient **CDN asset delivery**, leveraging **Chrome DevTools** and **React Profiler** to identify and resolve rendering bottlenecks systematically.
- Engineered **JWT-based authentication** and role-based access control in a **Next.js** frontend with **React Query**, implementing HTTP-only cookies for secure token handling and integrating **REST API** endpoints for permission-based UI rendering.
- Scaled **state management** in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, streamlining data flow, eliminating redundant re-renders, and establishing maintainable patterns.
- Increased release reliability by integrating **Playwright** and **Cypress end-to-end tests** into the **CI/CD pipeline**, automating test reporting with **Allure Reports** and configuring real-time Slack notifications for build quality visibility on every push.

- Authored comprehensive **Jest** unit tests and integration tests for critical UI components and business logic, achieving high code coverage thresholds enforced through automated CI gates to prevent regressions before merge.
- Configured and optimized **Webpack** and **Vite** build pipelines for production deployments, implementing tree-shaking, chunk splitting, and asset compression to minimize bundle sizes within **Docker**-containerized build environments.
- Collaborated with backend (**Python**-based services) and design teams in an **agile Scrum** environment, participating in sprint planning, code reviews, and architecture discussions using **Jira** and **Confluence** to continuously improve delivery cadence.

DESCASIO LTD Lagos, Nigeria
Staff Frontend Engineer *May 2021 - Apr 2022*

- Owned the core **frontend architecture** for a data-heavy **React** dashboard serving enterprise and education-sector clients, implementing virtualization and efficient state management with **Redux** to handle large datasets seamlessly.
- Optimized frontend performance by identifying render bottlenecks using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through **webpack-bundle-analyzer** and rollup-plugin-visualizer, achieving a **35% faster load time**.
- Built and maintained **responsive, accessible interfaces** using **React, TypeScript, Tailwind CSS**, and semantic HTML, ensuring cross-browser compatibility and adherence to **WCAG standards** across all supported devices and screen sizes.
- Developed interactive **Storybook** component documentation for the shared UI library, enabling designers and developers to preview, test, and iterate on components independently before integration into production applications.
- Configured **CI/CD pipelines** using **GitHub Actions** and **Docker** for automated builds, testing with **Jest** and **Cypress**, and deployment, reducing manual release overhead and accelerating delivery cycles.
- Integrated **REST** and **GraphQL APIs** into frontend applications, designing efficient data fetching layers with caching strategies that reduced API calls by 40% and improved perceived application responsiveness.
- Established engineering standards for code quality, testing, and deployment across the team using **ESLint, Prettier, Husky, Lint-staged**, and Git hooks, reducing errors and enforcing consistent code style across all repositories.
- Implemented **SSR and SSG** strategies with **Next.js** for content-heavy pages, improving SEO visibility, page speed scores, and organic traffic through server-side rendering, meta tag management, and structured data markup.
- Collaborated cross-functionally within an **agile Scrum** team, taking ownership of feature delivery from design handoff through deployment while contributing to sprint retrospectives, process improvements, and knowledge sharing sessions.
- Mentored junior engineers on **React** best practices, **TypeScript** patterns, automated testing, and modern JavaScript, fostering a culture of high-quality, maintainable code and continuous learning across the engineering team.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
