SUMMARY

Senior Frontend Engineer with 8+ years of experience delivering high-performance, production-grade React and TypeScript applications serving millions of users across large-scale, data-intensive platforms. Deep mastery of JavaScript and advanced TypeScript patterns, with proven expertise in monorepo architectures (Nx, Turborepo), modern state management (React Query, Zustand, Redux), and web performance optimization. Track record of driving technical excellence in product-focused environments through scalable component systems, robust CI/CD pipelines, and meticulous attention to code maintainability, quality, and long-term project health.

CORE COMPETENCIES

- **JavaScript & TypeScript Mastery:** Deep expertise in modern JavaScript (ESNext), advanced TypeScript (generics, discriminated unions, conditional types, type inference), and strongly-typed application architectures.
- **React Ecosystem:** React, Next.js (SSR/SSG/ISR), React Query, Zustand, Redux, component-driven development, and cross-platform UI architecture.
- **Monorepo & Build Systems:** Nx, Turborepo, Webpack, Vite, Rollup, tree-shaking, code splitting, and optimized build pipelines for multi-platform output.
- **Web Performance & Optimization:** Core Web Vitals, Lighthouse audits, lazy loading, memoization, virtualization, CDN strategies, and bundle size reduction.
- **Testing & Quality Assurance:** Jest, Cypress, Playwright, visual regression testing, Allure Reports, and CI-driven automated testing pipelines.
- **CI/CD & DevOps:** GitHub Actions, Docker, automated builds, deployments, release strategies, feature flags, and canary deploys.
- **HTTP & API Integration:** REST APIs, GraphQL, HTTP protocol, JWT authentication, role-based access control, WebSockets, and real-time data communication.
- **Code Quality & Maintainability:** ESLint, Prettier, Husky, Lint-staged, Storybook, design systems, architecture reviews, and engineering standards.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)

Frontend Software Engineer (React / TypeScript) — *May 2023 - Present*

- Architected a **reusable design system** in **React** and **TypeScript** with Radix UI primitives and full **Storybook** documentation, establishing a scalable component library used across multiple product teams that improved UI consistency and developer velocity.
- Developed and maintained complex **React** and **Next.js** applications using **advanced TypeScript** patterns including generics, discriminated unions, and conditional types to ensure type-safe component APIs, reducing runtime errors and improving code maintainability.
- Scaled **state management** in a large application by integrating **React Query** for server-state caching and **Redux** for complex client state, streamlining data flow, eliminating redundant re-renders, and establishing patterns that accelerated developer onboarding.
- Optimized application performance in a **React** and **TypeScript** SPA by implementing **lazy loading, code splitting, dynamic imports**, and image optimization, reducing load times significantly and improving **Core Web Vitals** scores measured via **Lighthouse**.
- Enhanced responsiveness and runtime efficiency using **memoization**, virtualized lists, and efficient **CDN asset delivery**, leveraging **Chrome DevTools** and **React Profiler** to systematically identify and resolve rendering bottlenecks impacting user experience.
- Engineered **JWT-based authentication** and role-based access control in a **Next.js** frontend, implementing secure **HTTP** cookie-based token handling and integrating **REST API** endpoints for permission-based UI rendering across the platform.
- Increased release reliability by integrating **Playwright** and **Cypress end-to-end tests** into the **CI/CD pipeline**, automating test reporting with **Allure Reports** and configuring real-time notifications for build quality visibility on

every production push.

- Authored comprehensive **Jest** unit tests and integration tests for critical UI components and business logic, achieving high code coverage thresholds enforced through automated CI gates to prevent regressions before merge to main.
- Configured and optimized **Webpack** and **Vite** build pipelines for production deployments, implementing **tree-shaking**, chunk splitting, and asset compression within **Docker**-containerized environments to minimize bundle sizes across platforms.
- Collaborated closely with backend and design teams in a **product-focused** environment, participating in sprint planning, code reviews, and architecture discussions to maximize quality, maintain **code health**, and continuously improve delivery cadence.

DESCASIO LTD Lagos, Nigeria
Staff Frontend Engineer *May 2021 - Apr 2022*

- Owned the core **frontend architecture** for a data-heavy **React** dashboard serving financial and enterprise clients, implementing virtualization and efficient state management with **Redux** and **Zustand** to handle large datasets seamlessly at scale.
- Optimized frontend performance by identifying render bottlenecks using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through **webpack-bundle-analyzer** and rollup-plugin-visualizer, achieving a **35% faster load time** across devices.
- Structured the project as a **monorepo** using **Nx** for shared component libraries, utilities, and configuration, enabling efficient code reuse across multiple frontend applications and reducing duplication across the engineering team.
- Built and maintained **responsive interfaces** using **React, TypeScript**, and **Tailwind CSS**, ensuring cross-browser compatibility, pixel-perfect rendering, and meticulous **attention to detail** across all supported devices and screen sizes.
- Configured **CI/CD pipelines** using **GitHub Actions** and **Docker** for automated builds, testing with **Jest** and **Cypress**, and deployment, reducing manual release overhead and accelerating delivery cycles with zero-downtime deploys.
- Integrated **REST** and **GraphQL APIs** into frontend applications over **HTTP**, designing efficient data fetching layers with **React Query** caching strategies that reduced API calls by 40% and improved perceived application responsiveness.
- Established engineering standards for code quality, testing, and deployment across the team using **ESLint, Prettier, Husky, Lint-staged**, and Git hooks, prioritizing long-term **code maintainability** and consistent style across all repositories.
- Developed interactive **Storybook** component documentation for the shared UI library, enabling designers and developers to preview, test, and iterate on components independently before integration into production applications.
- Implemented **SSR and SSG** strategies with **Next.js** for content-heavy pages, improving SEO visibility, page speed scores, and organic traffic through server-side rendering and performance-first architecture decisions.
- Mentored junior engineers on **React** best practices, **advanced TypeScript** patterns, testing strategies, and modern **JavaScript**, fostering a culture of high-quality, maintainable code and technical excellence across the engineering team.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
