SUMMARY

Product-minded Fullstack Software Engineer with 6+ years of experience building end-to-end features using React, TypeScript, Python, and Node.js across health-tech and data-intensive platforms. Proven ability to own features from implementation through deployment, design and integrate GraphQL and REST APIs, and deliver production systems from rapid prototypes. Passionate about user impact, data-driven product development, and working within autonomous teams to ship personalized, high-quality digital experiences.

CORE COMPETENCIES

- **Fullstack Development:** React, TypeScript, Python, Node.js, Next.js, and end-to-end feature ownership from design to deployment.
- **API Design & Integration:** GraphQL, REST, FastAPI, React Query, and secure API patterns including JWT authentication and RBAC.
- **Frontend Architecture:** Scalable component systems, design systems (Radix UI), state management (Redux, React Query), and SSR/SSG strategies.
- **Testing & Observability:** Jest, Cypress, Playwright, Allure Reports, Sentry, Datadog RUM, and CI-driven QA pipelines.
- **Cloud & Infrastructure:** Docker, AWS (CloudFront, S3, EKS), Kubernetes, Vercel, and CI/CD automation via GitHub Actions.
- **Database & Data Modeling:** PostgreSQL, MongoDB, Redis, Prisma, and data-driven product development workflows.
- **AI-Assisted Development:** Proficient with Cursor, GitHub Copilot, LLM integration, and prompt engineering for accelerated workflows.
- **Product & Collaboration:** Agile/Scrum, roadmap contribution, cross-functional teamwork with PMs, designers, and domain experts.

WORK EXPERIENCE

Roche Genentech San Francisco, CA (Remote)

Fullstack Software Engineer (React, Python) *May 2023 - Present*

- Architected a **reusable design system** in **React** and **Radix UI**, establishing a scalable component library that improved UI consistency, accessibility, and developer velocity across multiple product teams in a clinical trial data platform.
- Owned features **end-to-end** from design through deployment, developing **React** and **TypeScript** frontends backed by **Python** services, delivering personalized user experiences for clinical data workflows.
- Designed and integrated **GraphQL** and **REST APIs** to connect frontend interfaces with backend data services, ensuring type-safe contracts, efficient data fetching, and seamless integration with complex clinical data models.
- Engineered **JWT-based authentication** and **role-based access control** in a **Next.js** frontend with **TypeScript** and **React Query**, implementing HTTP-only cookies for secure token handling and permission-based UI rendering.
- Scaled **state management** in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, streamlining data flow, eliminating redundant re-renders, and establishing maintainable patterns that accelerated developer onboarding.
- Developed rapid **prototypes** that evolved into production-grade features, collaborating with product managers, designers, and domain experts to validate ideas quickly and iterate based on user feedback and data.
- Optimized application performance in a **React** and **TypeScript** SPA by implementing lazy loading, code splitting, dynamic imports, and image optimization, reducing load times significantly using **Lighthouse** and **Chrome DevTools** profiling.
- Containerized frontend and backend services using **Docker**, ensuring consistent development and deployment environments across teams, and integrated with **AWS** cloud infrastructure for production deployments.
- Increased release reliability by integrating **Playwright end-to-end tests** and **Cypress** into the **CI/CD pipeline**, automating test reporting with **Allure Reports** and configuring real-time Slack notifications for build quality visibility.

- Contributed to **roadmap strategy** alongside product managers and medical editors, providing technical input on feature feasibility, data modeling decisions, and architecture trade-offs for the clinical data platform.

DESCASIO LTD Lagos, Nigeria

Staff Fullstack Engineer *May 2021 - Apr 2022*

- **Owned** the core **frontend architecture** for a data-heavy **React** dashboard, implementing virtualization and efficient state management with **Redux** to handle large datasets seamlessly while maintaining smooth UI interactions.
- Built and maintained **RESTful APIs** using **Node.js** and **Python** to power data-intensive dashboard features, designing efficient data models and ensuring performant query patterns for **MongoDB** and **PostgreSQL** backends.
- Optimized frontend performance by identifying render bottlenecks using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through rollup-plugin-visualizer and webpack-bundle-analyzer, achieving a **35% faster load time**.
- Designed and implemented **database schemas** and data modeling patterns, optimizing queries for analytical dashboards and ensuring efficient data retrieval across multiple data sources.
- Developed **automated testing suites** using Jest for unit tests and Cypress for end-to-end coverage, establishing testing standards that improved code reliability and reduced regression bugs across releases.
- Integrated **Sentry** and monitoring tools for real-time error tracking and application observability, enabling proactive bug detection and faster incident resolution.
- Established engineering standards for **code quality**, testing, and deployment across the team using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, reducing errors and accelerating CI/CD processes.
- Built reusable **React component libraries** with **Storybook** documentation, enabling consistent UI patterns across the product and accelerating feature development for the team.
- Collaborated with **product managers** and stakeholders to translate business requirements into technical specifications, prioritizing features based on user impact and data-driven insights.
- **Mentored** junior engineers on fullstack best practices including API design, database optimization, React patterns, and testing strategies, fostering a culture of high-quality, maintainable code.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
