SUMMARY

Senior Full-Stack Software Engineer with 6+ years of experience owning features end-to-end across data-intensive React and Node.js applications. Proven track record building scalable frontends with React 18, TypeScript, Vite, and Tailwind CSS, backed by robust APIs and database-driven workflows. Experienced in high-ownership environments with flat hierarchies, delivering intuitive user experiences for complex B2B platforms in health-tech and enterprise SaaS.

CORE COMPETENCIES

- **Frontend Development:** React 18, TypeScript, Vite, Tailwind CSS, Tanstack Query (React Query), Zustand, and component-driven architecture.
- **Backend & APIs:** Node.js, Python, REST, GraphQL, JWT authentication, and role-based access control patterns.
- **Databases:** MongoDB, PostgreSQL, Redis, Prisma ORM, data modeling, and analytics workflow design.
- **Cloud & Infrastructure:** Azure, AWS (CloudFront, S3), Docker, Vercel, and CI/CD automation via GitHub Actions.
- **Build Tools & DX:** Vite, Webpack, Rollup, Turborepo, ESLint, Prettier, Husky, and monorepo architectures.
- **Testing & Quality:** Jest, Cypress, Playwright, Allure Reports, Sentry, and Datadog RUM for observability.
- **Product & Ownership:** End-to-end feature lifecycle management, user feedback integration, rapid iteration, and product-oriented mindset.
- **Leadership:** Technical mentorship, architecture reviews, Agile/Scrum, code review culture, and cross-functional collaboration.

WORK EXPERIENCE

Roche Genentech San Francisco, CA (Remote)
Senior Full-Stack Software Engineer *May 2023 - Present*

- Owned **full-stack features end-to-end** from design through deployment on a clinical trial data platform, making independent technical decisions that improved data workflows for global users across multiple product teams.
- Architected a **reusable design system** in **React** and **Radix UI** with **Tailwind CSS** styling, establishing scalable component patterns that improved UI consistency, accessibility, and developer velocity.
- Built **data-intensive dashboards** and analytics features using **React**, **TypeScript**, and **React Query (Tanstack Query)** for efficient server-state caching, enabling users to interact with complex clinical datasets through intuitive interfaces.
- Designed and integrated **GraphQL** and **REST APIs** connecting frontend interfaces with backend services, ensuring type-safe data contracts, efficient pagination, and optimized query patterns for large datasets.
- Engineered **JWT-based authentication** and **role-based access control** in a **Next.js** frontend with **TypeScript**, implementing HTTP-only cookies for secure token handling and permission-based UI rendering.
- Scaled **state management** in a large application by integrating **Redux** for complex client state and **React Query** for cached API data, streamlining data flow and eliminating redundant re-renders.
- Optimized application performance using **Vite**-based build pipelines, lazy loading, code splitting, and dynamic imports, reducing load times significantly as measured by **Lighthouse** and **Chrome DevTools** profiling.
- Containerized services using **Docker** for consistent development environments and deployed to **AWS** cloud infrastructure, collaborating with DevOps on CI/CD pipeline automation.
- Increased release reliability by integrating **Playwright** and **Cypress** end-to-end tests into the **CI/CD pipeline**, automating test reporting with **Allure Reports** and configuring Slack notifications for build quality visibility.
- Gathered **user feedback** from clinical site users and collaborated with product managers and domain experts to iterate on features rapidly, ensuring long-term code maintainability and intuitive user workflows.

DESCASIO LTD Lagos, Nigeria
Staff Full-Stack Engineer *May 2021 - Apr 2022*

- **Owned** the core architecture for a **data-heavy React dashboard**, implementing virtualization and efficient state management with **Redux** to handle large datasets seamlessly across **MongoDB**-backed analytics views.

- Built and maintained **Node.js** backend services and **RESTful APIs** powering data-intensive features, designing efficient data models and query patterns for **MongoDB** and **PostgreSQL** databases.
- Optimized frontend performance by identifying render bottlenecks using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through rollup-plugin-visualizer and webpack-bundle-analyzer, achieving a **35% faster load time**.
- Designed **intuitive end-to-end user workflows** for complex data operations, translating business requirements into clean interfaces that reduced user friction and improved task completion rates.
- Integrated **Sentry** for real-time error tracking and application observability, enabling proactive bug detection and faster incident resolution across the full stack.
- Developed automated testing suites using **Jest** and **Cypress**, establishing testing standards that improved code reliability and reduced regression bugs across releases.
- Established engineering standards for **code quality** and deployment using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, reducing errors and accelerating CI/CD processes.
- Built reusable **React component libraries** with **Storybook** documentation, enabling consistent UI patterns and accelerating feature development across the team.
- Made **independent technical decisions** on architecture, tooling, and implementation approaches, taking full ownership of feature delivery from design through maintenance.
- **Mentored** junior engineers on fullstack best practices including React patterns, API design, database optimization, and testing strategies, fostering a high-quality engineering culture.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
