SUMMARY

Full Stack Web Developer with 6+ years of experience building and scaling SaaS applications using Node.js, React, Redux, and modern JavaScript (ES6+). Proven track record delivering high-traffic user-facing features within agile, cross-functional teams, advancing microservice architectures, and applying SOLID, KISS, and YAGNI principles to maintain clean, testable codebases. Experienced in Docker-based deployments, MongoDB, Redis, and CI/CD automation.

CORE COMPETENCIES

- **Full Stack Development:** Node.js, React, Redux, ES6+, TypeScript, Next.js, and microservice/micro-app architectures.
- **Backend & APIs:** Node.js/npm ecosystem, REST, GraphQL, Express, JWT authentication, and server-side rendering.
- **Databases & Caching:** MongoDB, Redis, PostgreSQL, Elasticsearch, Prisma ORM, and efficient query optimization.
- **CSS & Styling:** PostCSS, BEM/SUIT-CSS methodologies, Tailwind CSS, responsive design, and cross-browser compatibility.
- **Testing & Quality:** Jest, Mocha, Cypress, Playwright, unit/integration/E2E testing, and CI-driven QA pipelines.
- **DevOps & Infrastructure:** Docker, AWS (CloudFront, S3), Vercel, GitHub Actions, CI/CD pipelines, and Sentry monitoring.
- **Engineering Principles:** SOLID, KISS, YAGNI, TDD/BDD, code reviews, Agile/Scrum, and sprint planning.
- **Collaboration:** Cross-functional teamwork with PMs and QA, technical mentorship, and feature estimation.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Full Stack Web Developer (Node.js, React) — *May 2023 - Present*

- Developed and expanded innovative clinical data applications serving thousands of users using **React**, **Redux**, and **Node.js**, collaborating with product managers and QA teams to ship features iteratively in an agile environment.
- Architected a **reusable component library** in **React** and **Radix UI**, establishing scalable design patterns that improved UI consistency and developer velocity across multiple product teams.
- Advanced **Node.js-based microservice architectures** by modularizing frontend services, implementing efficient API routing, and establishing clear service boundaries to support independent team deployments.
- Engineered **JWT-based authentication** and **role-based access control** using **Node.js** and **Next.js**, implementing HTTP-only cookies for secure token handling and permission-based rendering.
- Scaled **state management** using **Redux** for complex client state and **React Query** for cached API data, applying **SOLID principles** to streamline data flow and eliminate redundant re-renders.
- Optimized application performance through lazy loading, **code splitting**, dynamic imports, and efficient **CDN asset delivery**, reducing load times significantly as measured by Lighthouse audits.
- Integrated **Sentry** for real-time error monitoring and **Elasticsearch**-powered search features, improving application observability and user experience across the platform.
- Participated in **sprint planning** and effort estimation, contributing to roadmap strategy and collaborating with product managers to prioritize features based on user impact and technical feasibility.
- Researched and integrated emerging technologies including AI-assisted development tools, improving development workflows and accelerating feature delivery across the team.
- Increased release reliability by integrating **Cypress** and **Playwright E2E tests** into the **CI/CD pipeline**, automating test reporting with Allure Reports and configuring real-time Slack notifications for build quality.

DESCASIO LTD — Lagos, Nigeria
Staff Full Stack Developer — *May 2021 - Apr 2022*

- **Owned** the full stack architecture for a data-heavy **React/Redux** dashboard backed by **Node.js** services and **MongoDB**, implementing virtualization to handle large datasets seamlessly.
- Built and maintained **Node.js microservices** with **Express**, designing RESTful APIs that followed **SOLID** and **KISS** principles for clean, maintainable backend code.

- Optimized frontend performance using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through webpack-bundle-analyzer, achieving a **35% faster load time** across devices.
- Implemented **Redis** caching layers for frequently accessed data, reducing database query load and improving API response times for high-traffic dashboard endpoints.
- Developed comprehensive **unit and integration tests** using **Jest** and **Mocha**, achieving high test coverage and establishing testing standards across the engineering team.
- Applied **BEM/SUIT-CSS** methodologies and **PostCSS** preprocessors to maintain consistent, responsive styling across the application, ensuring cross-browser compatibility.
- Configured **Docker** containers for local development and production deployments, standardizing environments and reducing "works on my machine" issues across the team.
- Established engineering standards using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions** CI/CD pipelines, reducing errors and accelerating deployment processes.
- Collaborated with **product managers** and QA teams on feature planning and estimation, contributing to sprint ceremonies and ensuring quality through iterative development cycles.
- **Mentored** junior developers on **Node.js** best practices, React patterns, and testing strategies, fostering a culture of high-quality, maintainable code and consistent design.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
