DIMPACT / SOFHA GmbH
Recruiting Team
Berlin, Germany

Dear Hiring Team,

SOFHA has been building imaging and print workflow technology since 1981, partnering with Adobe and companies like Konica Minolta to power professional printing worldwide. The idea of building secure, modern web applications that control high-speed industrial printers is a genuinely interesting challenge, and one where my 6+ years of experience with React, TypeScript, Vite, React Query, and Zustand maps directly to what you need. I would love to contribute as your next Web Developer.

In my current role as a Web Developer (React, TypeScript) at Roche Genentech, I build secure web applications using React, TypeScript, HTML5, and CSS3 within a modular architecture. I work daily with Vite for build tooling, React Query for server-state caching, and Zustand-style patterns for client state, the exact stack listed in your requirements. I have also architected theme-able component systems using Material UI and Radix UI, configured npm workspaces and monorepo setups with Turborepo, and integrated Playwright and Cypress test automation into CI/CD pipelines. Code reviews, concept writing, and technical documentation are regular parts of my workflow, and I am comfortable working in international, collaborative teams.

Previously, as a Staff Web Developer at DESCASIO, I owned the frontend architecture for a data-heavy React dashboard, building modular, reusable component libraries and developing test automation simulators that mimicked complex application workflows. I reduced bundle sizes by 30%-40% through build analysis tooling, achieving a 35% faster load time, and established engineering standards with ESLint, Prettier, Husky, and CI/CD automation that the whole team adopted. I also mentored junior developers and managed Git workflows across the project.

SOFHA's combination of deep industry expertise with a modern frontend stack tells me this is a team that values doing things right. I would welcome the chance to discuss how my experience building secure, well-tested web applications with your exact toolchain can help move SOFHA's products forward.

Best regards,

Ogbonna Arinze
