SUMMARY

Web Developer with 6+ years of experience building secure, modular web applications using React, TypeScript, HTML5, and CSS3. Deep expertise with modern build tools including Vite, React Query, and Zustand, combined with proficiency in Material UI, monorepo architectures (npm workspaces), and CI/CD pipelines. Experienced in designing software per specifications, conducting code reviews, and developing test automation in collaborative, international team environments.

CORE COMPETENCIES

- **Frontend Development:** React, TypeScript, HTML5, CSS3, Vite, React Query (Tanstack Query), and Zustand for state management.
- **UI Components & Design:** Material UI, Radix UI, theme-able component systems, Storybook, and Figma-to-code workflows.
- **Build Tools & Monorepos:** Vite, Webpack, Rollup, npm workspaces, Turborepo, Nx, and modular architecture patterns.
- **Version Control & CI/CD:** Git, GitLab, GitHub Actions, CI/CD pipelines, ESLint, Prettier, Husky, and Lint-staged.
- **Testing & Automation:** Jest, Cypress, Playwright, test automation simulators, and visual regression testing.
- **Architecture & Patterns:** Modular architecture, software design patterns, component reuse, and clean code principles.
- **Node.js Tooling:** Node.js, npm ecosystem, Express, and backend API integration.
- **Collaboration:** Code reviews, concept writing, documentation, Agile/Scrum, and technical mentorship.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Web Developer (React, TypeScript) — *May 2023 - Present*

- Designed and built **secure web applications** using **React**, **TypeScript**, **HTML5**, and **CSS3** for a clinical trial data platform, implementing modular architecture and clean software design patterns throughout.
- Architected a **reusable component library** in **React** and **Radix UI** with **theme-able components**, establishing a scalable design system that improved UI consistency and developer velocity across teams.
- Implemented efficient **state management** using **React Query (Tanstack Query)** for server-state caching and **Zustand**-style patterns for client state, ensuring predictable data flow and minimal re-renders.
- Optimized **build pipelines** using **Vite** and **Webpack**, configuring code splitting, tree shaking, and lazy loading to achieve significantly faster build times and reduced bundle sizes.
- Configured **npm workspaces** and **monorepo setups** using Turborepo, enabling shared component libraries and tooling across multiple application packages within the platform.
- Conducted thorough **code reviews**, wrote technical **concept documents**, and maintained comprehensive code documentation, ensuring knowledge sharing and maintainability across the engineering team.
- Developed **test automation** using **Playwright** and **Cypress**, building end-to-end test suites that simulated complex user workflows and integrated with **CI/CD pipelines** for automated quality gates.
- Engineered **JWT-based authentication** and role-based access control in **Next.js** with **TypeScript**, ensuring secure, permission-based UI rendering for different user roles.
- Integrated with **Git**-based workflows and **GitHub Actions** CI/CD pipelines, configuring automated linting, testing, and deployment processes for consistent code quality.
- Collaborated with **UX designers** and product teams to translate design specifications into pixel-perfect, accessible **Material UI**-based interfaces, ensuring cross-browser compatibility and responsive behavior.

DESCASIO LTD — Lagos, Nigeria
Staff Web Developer — *May 2021 - Apr 2022*

- **Owned** the core **frontend architecture** for a data-heavy **React** dashboard, implementing **modular architecture** with clean design patterns and virtualization for seamless large dataset handling.

- Built **theme-able UI components** using **React** and component library patterns with **Storybook** documentation, ensuring consistent, reusable design across the application.
- Optimized frontend performance using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through **rollup-plugin-visualizer** and **webpack-bundle-analyzer**, achieving a **35% faster load time**.
- Developed **test automation simulators** and comprehensive test suites using **Jest** and **Cypress**, mimicking complex application workflows and establishing quality gates in the CI/CD pipeline.
- Managed **Git** workflows and configured **CI/CD pipelines** using **GitHub Actions**, automating linting, testing, and deployment processes for the team.
- Established engineering standards using **ESLint, Prettier, Husky, Lint-staged**, enforcing consistent code quality across the team and reducing bugs in production deployments.
- Conducted regular **code reviews** and wrote technical documentation, improving knowledge sharing and ensuring long-term maintainability of the codebase.
- Integrated frontend with **Node.js** backend services and RESTful APIs, ensuring efficient data contracts and modular service boundaries.
- Configured **npm workspaces** for shared utilities and component packages, streamlining the development workflow across multiple application modules.
- **Mentored** junior developers on **React**, **TypeScript**, and frontend best practices, fostering a collaborative, high-quality engineering culture.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
