SUMMARY

Lead Fullstack Engineer with 6+ years of experience building production-grade React and Next.js applications from prototype to scale. Proven expertise in TypeScript, type-safe API design (REST, GraphQL), and frontend architecture, with hands-on experience migrating legacy codebases to modern frameworks. Strong track record establishing CI/CD pipelines, mentoring engineers, and setting technical standards in high-ownership, fast-paced environments. Passionate about creative, real-time web experiences and cloud-native deployments on AWS.

CORE COMPETENCIES

- **Frontend & Fullstack:** React.js, Next.js 14, TypeScript, Node.js, and prototype-to-production application development.
- **API Design:** REST, GraphQL, tRPC, WebSockets, real-time communication, and type-safe data contracts.
- **Creative Coding & Animation:** Canvas, SVG animations, CSS animations, Framer Motion, and real-time rendering techniques.
- **Cloud & Infrastructure:** AWS (CloudFront, S3), Azure, Vercel, Docker, infrastructure-as-code, and CI/CD automation.
- **Build Tools & Architecture:** Vite, Webpack, Turborepo, monorepos, micro-frontends, and modular architecture patterns.
- **Testing & Quality:** Jest, Cypress, Playwright, automated test pipelines, and CI-driven quality gates.
- **Design Systems:** Radix UI, custom component libraries, Storybook, Figma-to-code, and accessibility (WCAG).
- **Leadership:** Technical direction, mentorship, architecture reviews, Agile/Scrum, and cross-functional collaboration.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)

Lead Fullstack Engineer (React, Next.js) — *May 2023 - Present*

- Led the **migration of a legacy Vue.js application** to a production-grade **React** Chrome extension, architecting scalable patterns and establishing the technical foundation for the new codebase from prototype to production.
- Architected a **reusable design system** in **React** and **Radix UI**, setting **technical standards** for component architecture, accessibility, and API design that guided the entire frontend team.
- Developed **type-safe APIs** using **GraphQL** and **REST** to interface frontend applications with backend services, ensuring strict data contracts, efficient caching, and seamless integration with complex data models.
- Built **real-time, interactive features** using **WebSocket** patterns and dynamic rendering techniques, delivering responsive user experiences for data-intensive clinical workflows.
- Engineered **JWT-based authentication** and role-based access control in **Next.js** with **TypeScript**, implementing HTTP-only cookies for secure token handling and deploying to **AWS** cloud infrastructure.
- Established **CI/CD pipelines** and automated quality gates by integrating **Playwright** and **Cypress** E2E tests, configuring **Allure Reports** and Slack notifications for real-time build visibility.
- Optimized application performance through **Vite**-based builds, lazy loading, code splitting, and **CDN** asset delivery, achieving significant load time improvements measured via Lighthouse profiling.
- Scaled **state management** in large **Next.js** applications using **Redux** and **React Query**, streamlining data flow and establishing maintainable patterns that accelerated developer onboarding.
- **Mentored** team members on frontend best practices, architecture patterns, and testing strategies, fostering a culture of technical excellence and consistent code quality.
- Contributed to **roadmap strategy** alongside product managers and designers, providing technical input on feature feasibility and architecture trade-offs for the platform.

DESCASIO LTD — Lagos, Nigeria

Staff Fullstack Engineer — *May 2021 - Apr 2022*

- **Owned** significant parts of the codebase as the **lead frontend architect** for a data-heavy **React** dashboard, making independent technical decisions on architecture, tooling, and implementation approaches.

- Built **prototype features** that evolved into production systems, rapidly iterating based on user feedback and stakeholder input to validate ideas and deliver business value quickly.
- Developed **interactive data visualizations** and **animation-driven interfaces** using **CSS animations** and **SVG** techniques, creating engaging user experiences for complex data presentation.
- Optimized frontend performance using **React Profiler** and **Lighthouse**, reducing bundle size by **30%-40%** through bundle analysis tools, achieving a **35% faster load time** across devices.
- Established **CI/CD pipelines** and engineering standards using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, setting the technical bar for the team.
- Configured **Docker** containers for consistent development and deployment environments, deploying to cloud infrastructure with automated build and release processes.
- Built reusable **React component libraries** with **Storybook** documentation, creating a design system that enabled consistent UI patterns and accelerated feature development.
- Integrated with **REST APIs** and **WebSocket** endpoints, building real-time features and ensuring reliable data synchronization between frontend and backend services.
- Developed comprehensive **test suites** using **Jest** and **Cypress**, establishing automated testing standards and quality gates for the entire team.
- **Mentored** junior engineers on React, TypeScript, API design, and fullstack best practices, guiding their growth and fostering a high-quality engineering culture.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
