SUMMARY

Senior Frontend Engineer with 6+ years of experience designing and building powerful, intuitive UIs for complex data platforms using React, TypeScript, and modern JavaScript (ES6+). Proven track record of end-to-end ownership in complex software projects, from building operational dashboards and data visualization interfaces to architecting scalable design systems. Experienced with GraphQL, Redux, Webpack, Docker, and AWS in high-growth product environments.

CORE COMPETENCIES

- **Frontend Architecture:** ReactJS, TypeScript, Next.js, Redux, component reuse, design systems, and testable architecture patterns.
- **Data Visualization:** D3.js integration, charting libraries, operational dashboards, and complex data-driven UI rendering.
- **Build Tools:** Webpack, Vite, Rollup, Turborepo, and custom build pipeline optimization for large-scale applications.
- **API & Integration:** GraphQL, RESTful APIs, React Query, Express, and efficient client-server data patterns.
- **Cloud & Infrastructure:** AWS (CloudFront, S3), Docker, Vercel, and CI/CD automation via GitHub Actions.
- **Testing & Quality:** Jest, Cypress, Playwright, Allure Reports, Sentry, Datadog RUM, and CI-driven quality gates.
- **Performance Engineering:** Code splitting, lazy loading, CDN strategies, Core Web Vitals, Lighthouse profiling, and bundle analysis.
- **Leadership:** End-to-end project ownership, architecture reviews, mentorship, Agile/Scrum, and cross-functional collaboration.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Senior Frontend Engineer — *May 2023 - Present*

- Designed and built **powerful, intuitive UIs** for a clinical trial data platform using **ReactJS**, **TypeScript**, and **Next.js**, supporting critical back-office processes including data monitoring, workflow management, and operational dashboards.
- Architected a **reusable design system** in **React** and **Radix UI**, focused on **component reuse**, testable architecture, and consistent UI patterns across multiple product teams.
- Built **data visualization dashboards** for clinical data analysis using **React** and charting libraries, rendering complex datasets with efficient pagination, virtualization, and real-time update patterns.
- Designed and integrated **GraphQL** and **RESTful APIs** connecting frontend interfaces with backend services, ensuring type-safe contracts and optimized query patterns for large-scale data operations.
- Scaled **state management** in a large **Next.js** application using **Redux** for complex client state and **React Query** for cached API data, streamlining data flow and eliminating redundant re-renders.
- Engineered **JWT-based authentication** and role-based access control in **Next.js** with **TypeScript**, implementing secure token handling and permission-based UI rendering for different user roles.
- Optimized build pipelines using **Webpack** and **Vite**, implementing code splitting, tree shaking, and lazy loading to reduce bundle sizes and improve load performance as measured by **Lighthouse**.
- Deployed and maintained frontend services on **AWS** infrastructure (**CloudFront, S3**), configuring **Docker** containers and CI/CD pipelines for automated, reliable releases.
- Increased release reliability by integrating **Playwright** and **Cypress** E2E tests into the CI/CD pipeline, with automated **Allure Reports** and Slack notifications for build quality visibility.
- Took **end-to-end ownership** of features from ideation to delivery, collaborating with cross-functional teams including product managers, designers, and domain experts to deliver high-impact platform capabilities.

DESCASIO LTD — Lagos, Nigeria
Staff Frontend Engineer — *May 2021 - Apr 2022*

- **Owned** the core **frontend architecture** for a data-heavy **React** dashboard, implementing virtualization and **Redux** state management to handle large datasets with smooth, responsive interactions.

- Built **operational dashboards** and data visualization interfaces using **React**, enabling users to monitor transactions, track metrics, and interact with complex analytical data in real time.
- Optimized frontend performance using **React Profiler** and **Lighthouse**, reducing bundle size by **30%-40%** through **rollup-plugin-visualizer** and **webpack-bundle-analyzer**, achieving a **35% faster load time**.
- Configured **Webpack** build pipelines with code splitting, tree shaking, and asset optimization, delivering significantly improved build performance and smaller production bundles.
- Integrated **Sentry** and **Datadog RUM** for real-time error tracking, performance monitoring, and application observability, enabling proactive issue detection.
- Deployed frontend applications using **Docker** containers and **AWS** infrastructure, establishing automated deployment workflows with **GitHub Actions**.
- Built reusable **React component libraries** with **Storybook** documentation, establishing **design system** patterns and accelerating feature development across the team.
- Established engineering standards for code quality using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, reducing errors and accelerating CI/CD processes.
- Delivered features with **end-to-end ownership**, from technical design through implementation, testing, and maintenance, making independent architectural decisions.
- **Mentored** junior engineers on React architecture, performance optimization, testing strategies, and frontend best practices.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
