SUMMARY

Senior Frontend Engineer with 6+ years of experience designing scalable frontend architectures for enterprise-grade, data-intensive platforms using React, ECMAScript (ES6+), TypeScript, and modern build tools (Webpack, Babel). Proven track record owning complete development cycles from design through implementation, testing, and maintenance, with backend understanding in Node.js, Docker, and Kubernetes. Experienced in building high-performance UIs that meet ambitious SLAs while collaborating directly with UX, product, and business teams.

CORE COMPETENCIES

- **Frontend Development:** React, Preact, Vue.js, ECMAScript (ES6+), TypeScript, HTML5, SCSS, and responsive UI architecture.
- **Build Tools:** Webpack, Babel, Vite, Rollup, Gulp, and custom build pipeline optimization for production deployments.
- **Backend Understanding:** Node.js 8+, Express, Docker, Kubernetes, Nginx, and server-side rendering strategies.
- **Performance & SLAs:** Core Web Vitals, Lighthouse profiling, code splitting, CDN strategies, and SLA-driven reliability engineering.
- **Testing & Quality:** Jest, Cypress, Playwright, Allure Reports, and CI-driven automated testing pipelines.
- **API Integration:** GraphQL, REST, React Query, Redux, and efficient client-server data patterns.
- **Design Systems:** Radix UI, Storybook, component library architecture, accessibility (WCAG), and Figma-to-code workflows.
- **UX Collaboration:** Direct interaction with UX/Product teams, user research integration, Agile/Scrum, and mentorship.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Senior Frontend Engineer (React) — *May 2023 - Present*

- Designed **scalable frontend architecture** for a clinical trial data platform using **React**, **TypeScript**, and **Next.js**, maintaining business object consistency while serving critical data management workflows for enterprise clients.
- Owned **complete development cycles** from design through implementation, testing, and maintenance, delivering features that met ambitious quality and performance SLAs across multiple product teams.
- Architected a **reusable design system** in **React** and **Radix UI**, establishing a component library with **SCSS** styling that improved UI consistency, accessibility (**WCAG**), and developer velocity.
- Configured **Webpack** and **Babel** build pipelines with code splitting, tree shaking, and lazy loading, significantly reducing bundle sizes and improving Core Web Vitals scores as measured by **Lighthouse**.
- Integrated **GraphQL** and **REST APIs** to connect frontend with backend services, designing efficient data contracts and optimized query patterns for large-scale data operations.
- Engineered **JWT-based authentication** and role-based access control in **Next.js**, implementing HTTP-only cookies and **Node.js** middleware for secure token handling and permission-based rendering.
- Scaled **state management** using **Redux** for complex client state and **React Query** for server-state caching, streamlining data flow and eliminating redundant re-renders across the application.
- Containerized frontend services using **Docker** and deployed to **Kubernetes**-orchestrated environments, collaborating with DevOps on reliable, automated release processes.
- Established **reliable system operations** by integrating **Playwright** and **Cypress** E2E tests into the CI/CD pipeline, with automated **Allure Reports** and monitoring for proactive quality assurance.
- Collaborated directly with **UX/Product teams** and business stakeholders to shape user experience, translating complex requirements into intuitive, performant interfaces.

DESCASIO LTD — Lagos, Nigeria
Staff Frontend Engineer — *May 2021 - Apr 2022*

- **Owned** the core **frontend architecture** for a data-heavy **React** dashboard processing large datasets, implementing virtualization and efficient **Redux** state management for seamless interactions.

- Built enterprise-grade UI features using **React**, **ECMAScript (ES6+)**, **HTML5**, and **SCSS**, ensuring cross-browser compatibility and responsive design across devices.
- Optimized frontend performance using **React Profiler** and **Lighthouse**, reducing bundle size by **30%-40%** through **webpack-bundle-analyzer**, achieving a **35% faster load time** and meeting performance SLAs.
- Configured **Webpack** and **Babel** build tools with custom optimization strategies, implementing code splitting and asset management for production deployments.
- Integrated **Node.js** backend services and **REST APIs**, building efficient data integration patterns between frontend and server-side components.
- Deployed applications using **Docker** containers with **Nginx** reverse proxy configuration, ensuring reliable, scalable hosting for the dashboard application.
- Established **testing standards** using **Jest** and **Cypress**, building automated test suites that validated critical user workflows and maintained high code reliability.
- Built reusable **React component libraries** with **Storybook**, establishing design system patterns that ensured consistent UI across the product.
- Established engineering standards using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions**, reducing errors and accelerating CI/CD processes.
- **Mentored** junior engineers on React patterns, frontend architecture, performance optimization, and collaborative development practices.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
