SUMMARY

Senior Software Engineer with 6+ years of experience building large-scale React and React Native applications, with deep expertise in performance optimization, architectural design, and cross-platform JavaScript profiling. Proven track record establishing performance monitoring culture through CI/CD integration, setting budgets, and mentoring engineers on complex debugging and profiling techniques. Experienced in architecting high-performance UI features, driving technical vision, and communicating architectural trade-offs to stakeholders.

CORE COMPETENCIES

- **React & React Native:** React, React Native (new architecture), TypeScript, component architecture, and cross-platform application development.
- **Performance Engineering:** React Profiler, Chrome DevTools, Lighthouse, bundle analysis, code splitting, performance budgets, and Core Web Vitals.
- **JavaScript Profiling:** Full-stack profiling across JavaScript runtimes, React Native DevTools, memory analysis, and render optimization.
- **Architecture & Migration:** Large-scale application architecture, legacy-to-modern migration strategies, and scalable component systems.
- **Animation & UI:** High-performance UI features, react-native-reanimated patterns, CSS animations, and smooth 60fps rendering.
- **CI/CD & Monitoring:** GitHub Actions, Playwright, Cypress, Sentry, Datadog RUM, Allure Reports, and performance monitoring in CI.
- **Cloud & Infrastructure:** AWS (CloudFront, S3), Docker, Kubernetes, Vercel, and automated deployment pipelines.
- **Leadership:** Technical vision and strategy, mentoring experienced engineers, architecture reviews, and stakeholder communication.

WORK EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)

Senior Principal Software Engineer (React) — *May 2023 - Present*

- Supported the **technical vision and strategy** for the frontend architecture powering a clinical data platform serving thousands of active users, defining patterns and standards adopted across multiple product teams.
- Led the **migration of a legacy Vue.js application** to a modern **React** architecture, resolving complex engineering challenges and establishing the new component framework, state management patterns, and build infrastructure.
- Established a **performance optimization culture** by setting performance budgets, integrating **Lighthouse** and **React Profiler** monitoring into CI/CD, and spearheading internal training on profiling and debugging techniques.
- Architected **high-performance UI features** using **React** and optimized rendering patterns, implementing virtualization, memoization, and efficient re-render strategies to maintain smooth interactions at scale.
- Debugged the **complete application stack** from React components through JavaScript runtime performance, native module integration, and network layer optimization, resolving critical performance regressions.
- Acted as a **technical beacon** for the frontend domain, **mentoring experienced engineers** on complex performance profiling, debugging techniques, and architectural best practices.
- Communicated **complex architectural decisions** and trade-offs to stakeholders, product managers, and engineering leadership, aligning technical strategy with business objectives.
- Architected a **reusable design system** in **React** and **Radix UI**, establishing scalable component patterns with accessibility standards that improved consistency across the platform.
- Integrated **Sentry** and **Datadog RUM** for real-time error tracking, performance monitoring, and application observability, enabling proactive detection of performance degradation.
- Increased release reliability by integrating **Playwright** and **Cypress** into the CI/CD pipeline with automated **Allure Reports**, establishing quality gates and performance regression detection in every build.

DESCASIO LTD — Lagos, Nigeria

Staff Frontend Engineer *May 2021 - Apr 2022*

- **Owned** the core **frontend architecture** for a data-heavy **React** dashboard, implementing virtualization and efficient state management to handle large datasets with smooth, high-performance interactions.
- Optimized frontend performance by identifying render bottlenecks using **React Profiler** and **Lighthouse Audits**, reducing bundle size by **30%-40%** through bundle analysis, achieving a **35% faster load time**.
- Established **performance budgets** and monitoring practices, integrating performance checks into the development workflow and training the team on profiling and optimization techniques.
- Architected **high-performance UI features** with efficient rendering patterns, memoization strategies, and optimized component hierarchies for smooth 60fps interactions.
- Built reusable **React component libraries** with **Storybook**, creating scalable design system patterns that ensured consistent, accessible UI across the application.
- Established engineering standards for code quality using **ESLint, Prettier, Husky, Lint-staged**, and **GitHub Actions** CI/CD pipelines, reducing errors and accelerating deployments.
- Integrated **Sentry** for error tracking and application observability, configuring alerts and dashboards for proactive performance monitoring.
- Configured **Docker** containers for deployment and **AWS** infrastructure for production hosting, ensuring reliable, scalable application delivery.
- Communicated **architectural decisions** and technical trade-offs to stakeholders, aligning engineering work with product goals and business priorities.
- **Mentored** engineers on React architecture, performance optimization, debugging techniques, and frontend best practices, building team capability and engineering culture.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
