SUMMARY

Senior Fullstack Developer with 6+ years of experience building complex, customer-facing web applications across the entire stack using **TypeScript**, **React**, **Node.js**, and **CSS**. Passionate about product work, with a strong focus on **clean architecture**, **domain-driven design**, and delivering rapid customer value through data-informed feature development. Experienced in collaborating closely with product managers and cross-functional teams in **remote-first** environments, combining deep object-oriented programming expertise with modern frontend craft to build maintainable, scalable monolithic applications.

CORE COMPETENCIES

Fullstack Development: React, TypeScript, Node.js, modern JavaScript (ESNext), object-oriented programming, and CSS (Tailwind CSS, custom design systems, responsive layouts).
Architecture & Design: Domain-Driven Design (DDD), Clean Architecture, monolithic applications, scalable component systems, SSR/SSG strategies, and design systems.
Product & UX: Product mindset, interaction design, customer feedback-driven development, feature flags, data analysis, and Figma-to-code workflows.
Frameworks & Tools: React, Next.js, Vue.js, Redux, React Query, Zustand, Storybook, Radix UI, and Webpack/Vite/Rollup.
Testing & Quality: Jest, Cypress, Playwright, TDD/BDD, ESLint, Prettier, Husky, and CI-driven QA with automated reporting.
Cloud, DevOps & Tooling: AWS (CloudFront, S3), Docker, GitHub Actions, CI/CD pipelines, Vercel, and feature flag strategies.
Databases & APIs: PostgreSQL, MongoDB, Redis, GraphQL, REST, JWT authentication, and role-based access control.
AI Integration: Pragmatic use of AI tools (LLM integration, prompt engineering, Vercel AI SDK), knowing when AI adds value and when to rely on engineering judgment.
Collaboration & Leadership: Remote-first communication (Slack, GitHub, Linear), mentorship, code reviews, architecture reviews, and Agile/Scrum/Kanban.

PROFESSIONAL EXPERIENCE

Roche Genentech — San Francisco, CA (Remote)
Senior Fullstack Developer — *May 2023 - Present*

- **Architected** the frontend system for a clinical trial data platform, designing a reusable **React** and **Radix UI** design system with **TypeScript** that improved consistency, accessibility (WCAG), and developer efficiency across multiple product verticals.
- **Developed** fullstack features end-to-end using **React**, **TypeScript**, and **Node.js**, collaborating closely with product managers to define requirements based on customer feedback and data analysis, embodying a strong **product mindset** throughout the development lifecycle.
- **Transformed** a legacy **Vue.js** web application into a **React Chrome extension**, redesigning the interaction model and optimizing clinical site workflows, resulting in increased adoption through close collaboration with design and backend teams.
- **Optimized** application performance in a **React** and **TypeScript**-based SPA by implementing lazy loading, code splitting, dynamic imports, and image optimization, reducing load times significantly. Enhanced responsiveness with **CSS** layouts, memoization, and efficient CDN asset delivery, using Lighthouse and Chrome DevTools to identify and resolve bottlenecks.

- **Engineered** a secure authentication and authorization layer using **JWT**-based authentication and **role-based access control** in a **Next.js** fullstack application with **TypeScript** and **React Query**, implementing HTTP-only cookies for token handling and collaborating with backend teams to enforce permission-based UI rendering.
- **Scaled** state management in a large **Next.js** application by integrating **Redux** for complex client state and **React Query** for cached API data, streamlining data flow, cutting redundant re-renders, and accelerating developer onboarding through consistent, maintainable patterns aligned with **clean architecture** principles.
- **Increased** release reliability and stakeholder confidence by integrating **Playwright** end-to-end tests and **Jest** unit tests into the **CI/CD pipeline** via **GitHub Actions**, automating test reporting with Allure Reports and configuring Slack notifications for real-time build quality visibility.
- **Championed** code quality and **clean code** practices by establishing PR review standards, maintaining comprehensive **ESLint** and **Prettier** configurations, and driving adoption of consistent coding patterns that reduced bugs and improved team velocity.
- **Collaborated** in a **remote-first** environment using **Slack**, **GitHub**, and project management tools, proactively sharing knowledge, participating in architecture discussions, and ensuring transparent communication across distributed team members.
- **Leveraged AI tools** strategically to accelerate development workflows, including code generation, test scaffolding, and documentation, while maintaining critical judgment about where AI adds value versus where manual engineering rigor is required.

DESCASIO LTD Lagos, Nigeria
Senior Fullstack Developer *May 2021 - Apr 2022*

- **Owned** the core architecture for a data-heavy **React** dashboard serving enterprise clients, implementing virtualization, efficient state management with **Redux**, and **CSS**-based responsive layouts to handle large datasets seamlessly across devices.
- **Optimized** frontend performance by identifying and resolving render bottlenecks using **React Profiler** and Lighthouse Audits, reducing bundle size by 30-40% through rollup-plugin-visualizer and webpack-bundle-analyzer, achieving a 35% faster load time and smoother runtime experience.
- **Designed** and implemented **RESTful API** integrations and data-fetching patterns using **React Query** and Axios, establishing consistent patterns for error handling, caching, and optimistic updates that improved both user experience and code maintainability.
- **Built** reusable, accessible UI components with **React**, **TypeScript**, and **Tailwind CSS**, creating a lightweight internal design system that enforced visual consistency and reduced feature development time by standardizing common interaction patterns.
- **Applied domain-driven design** principles to organize frontend modules around business domains, improving code discoverability and enabling team members to work on features independently with minimal merge conflicts.
- **Implemented feature flags** for progressive feature rollouts, enabling safe deployments to production and allowing the product team to run A/B experiments and gather customer feedback before full releases.
- **Established** engineering standards for code quality, testing, and deployment across the team using **ESLint**, **Prettier**, **Husky**, **Lint-staged**, and **GitHub Actions**, reducing errors and accelerating CI/CD processes.
- **Integrated PostgreSQL**-backed APIs with the React frontend, writing efficient queries and collaborating with backend engineers to design API contracts that minimized over-fetching and supported pagination for large result sets.
- **Deployed** and maintained applications using **Docker** and **AWS** (CloudFront, S3), configuring CDN caching strategies and automated deployment pipelines that reduced deployment friction and improved release cadence.

- **Mentored** junior engineers and guided fullstack best practices, fostering a culture of high-quality, maintainable code through pair programming, code reviews, and knowledge-sharing sessions on **clean architecture** and testing strategies.

EDUCATION

University of Nigeria Nsukka, Enugu
BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
