Hiring Team
Grafana Labs
Germany, Remote

Grafana Labs stands out to me because it sits at the intersection of product craftsmanship, open-source impact, and real operational complexity. The opportunity to join the **Senior Frontend Engineer, Alerting** role is especially compelling because alerting is one of the most mission-critical parts of any observability platform, and I am excited by frontend work that has to be both deeply usable and operationally dependable. With **8 years of professional experience** building React and TypeScript products across healthcare, fintech, civic tech, and enterprise software, I would bring strong frontend execution, testing discipline, and product-minded collaboration to this team.

In my current role as **Frontend Engineer** at Genentech (Roche), I spearheaded the redesign of a core product for connecting and transferring clinical trial site data to upstream EHR systems, migrating it from a Vue.js web application to a React Chrome extension. I also introduced Redux for state management and React Query for request caching, improved performance through lazy loading, code splitting, and responsive optimization, and increased stakeholder confidence by writing Playwright end-to-end tests in the CI/CD pipeline with Allure reports published on GitHub Pages. I also architected a reusable design system in React and Radix UI that improved UI consistency, accessibility, and developer efficiency across products. That combination of React ownership, reusable UI systems, and CI-driven quality aligns closely with what Grafana is looking for in frontend alerting work.

At Descasio, as **Senior Frontend Developer**, I led the design and implementation of a React user interface that drove a **25% boost in user engagement** and helped create a scalable frontend architecture that accelerated development by **30%**. I introduced Jest and Enzyme, leading to a **20% decrease in bug reports**, and profiled render bottlenecks using React Profiler and Lighthouse to reduce bundle size by **30-40%**, resulting in a **35% faster load time**. I enjoy the kind of work where frontend engineering is not just about screens, but about reliability, maintainability, and giving teams confidence in what they ship, which is a big part of why Grafana Labs appeals to me.

I would welcome the opportunity to discuss how my background in React, TypeScript, design systems, CI-driven testing, and data-heavy frontend products can contribute to the Grafana Alerting squad and help deliver alerting experiences that users can trust at scale.

Sincerely,

Ogbonna Arinze
