Hiring Team
Jedox
Germany, Remote

Jedox stands out to me because it combines enterprise-scale product complexity with a clear focus on helping businesses plan, analyze, and optimize performance more effectively. I am especially drawn to the opportunity to contribute to your Performance Management platform as a **Senior Frontend Engineer**, where the work spans modern frontend architecture, platform UI components, CI/CD automation, and close collaboration across product, UX/UI, QA, and engineering. With **8 years of professional experience** building React and TypeScript applications across healthcare, fintech, civic tech, and enterprise software, I would bring the combination of frontend ownership, delivery discipline, and cross-functional collaboration that this role calls for.

In my current role as **Frontend Engineer** at Genentech (Roche), I spearheaded the redesign of the main product for connecting and transferring clinical trial site data to upstream EHR systems, migrating from a Vue.js web application to a React Chrome extension. I maintained and extended the legacy Vue.js application during the transition, introduced Redux for state management and React Query for request caching, and improved performance through lazy loading, code splitting, image optimization, responsive layouts, memoization, and efficient CDN-backed asset delivery. I also increased stakeholder confidence by writing Playwright end-to-end tests in the CI/CD pipeline, publishing Allure reports on GitHub Pages, and sending Slack notifications with links to generated test results on every push. In parallel, I architected a reusable design system in React and Radix UI and mentored a team of two junior developers, experience that aligns closely with Jedox's emphasis on scalable, maintainable systems and mentoring through code reviews and knowledge sharing.

At Descasio, as **Senior Frontend Developer**, I led the design and implementation of an intuitive React user interface that drove a **25% boost in user engagement** and helped create a scalable frontend architecture that accelerated development by **30%**. I enhanced the development workflow by introducing Jest and Enzyme, leading to a **20% decrease in bug reports**, and optimized frontend performance and load efficiency by identifying and resolving render bottlenecks using React Profiler and Lighthouse, reducing bundle size by **30-40%**, which led to a **35% faster load time**. I also established engineering standards for code quality, testing, and deployment using ESLint, Prettier, Husky, Lint-staged, and GitHub Actions. That work reflects the same focus on clean code, quality, transparency, and team collaboration that comes through in Jedox's engineering culture and OneTeam mindset.

I would welcome the opportunity to discuss how my background in React, TypeScript, frontend architecture, CI/CD-driven quality, and stakeholder-heavy product development can help Jedox continue shaping scalable, cloud-ready platform experiences for its customers.

Sincerely,

Ogbonna Arinze
