Hiring Team
Refine Studio
Saarbruecken, Remote

Refine Studio stands out to me because it combines the kind of small-team ownership I enjoy with a product space that is genuinely people-centered. Building products around employee experience, recognition, and learning in a team of digital creatives where everyone has a voice is exactly the kind of environment where I do my best work. The opportunity to join as a **Frontend Developer** is especially appealing because it brings together React, Next.js, TypeScript, UX awareness, and the autonomy to push ideas forward in a startup-minded culture. With **8 years of professional experience** building user-facing products across healthcare, fintech, civic tech, and enterprise software, I would bring strong frontend execution, self-direction, and product collaboration to your team.

In my current role as **Frontend Engineer** at Genentech (Roche), I spearheaded the redesign of the main product for connecting and transferring clinical trial site data to various upstream EHR systems, migrating from a Vue.js web application to a Chrome extension in React. I maintained and extended the legacy Vue.js codebase during the transition, introduced Redux for state management and React Query for request caching, and improved usability and responsiveness through lazy loading, code splitting, image optimization, responsive layouts, memoization, and efficient asset delivery via CDN. I also increased stakeholder confidence by writing Playwright end-to-end tests in the CI/CD pipeline, publishing test results on GitHub Pages using Allure Reports, and sending Slack notifications with links to generated results on every push. In parallel, I architected a reusable design system in React and Radix UI and mentored a team of two junior developers, which reflects the kind of collaborative and refinement-driven engineering culture Refine Studio describes.

At Descasio, as **Senior Frontend Developer**, I led the design and implementation of an intuitive user interface using React, achieving a **25% boost in user engagement** while helping create a scalable frontend architecture that accelerated development by **30%**. I introduced Jest and Enzyme, leading to a **20% decrease in bug reports**, and optimized frontend performance and load efficiency by identifying and resolving render bottlenecks using React Profiler and Lighthouse, reducing bundle size by **30-40%**, which led to a **35% faster load time**. I also used Storybook to document components and support clearer collaboration around frontend implementation. That mix of hands-on frontend delivery, UX sensitivity, and team-oriented ownership aligns strongly with the way Refine Studio approaches product work.

I would welcome the opportunity to discuss how my background in React, Next.js, TypeScript, product-minded frontend delivery, and remote self-management can help Refine Studio continue shaping thoughtful employee-experience products for customers across Europe.

Sincerely,

Ogbonna Arinze
