Hiring Team
Verve
Berlin / Dortmund, Germany

Verve immediately stood out to me because this role sits at the intersection of real business complexity and frontend craft. Building user-facing applications for a retail media platform operating across 2,200+ stores, while translating complex adtech workflows into human-centric and lightning-fast product experiences, is exactly the kind of challenge I enjoy. The opportunity to join as a **Front End Engineer** is especially compelling because it combines React and Next.js product work with design-system thinking, data visualization, Figma-to-code execution, and close collaboration across design, product, and backend. With **8 years of professional experience** building fast, user-facing web applications across healthcare, fintech, civic tech, and enterprise software, I would bring strong frontend execution, product judgment, and delivery discipline to Verve Retail Media.

In my current role as **Frontend Engineer** at Genentech (Roche), I spearheaded the redesign of the main product for connecting and transferring clinical trial site data to various upstream EHR systems, migrating from a Vue.js web application to a Chrome extension in React. I maintained and extended the legacy Vue.js codebase during the transition, introduced Redux for state management and React Query for request caching, and optimized application performance through lazy loading, code splitting, image optimization, responsive layouts, memoization, and efficient asset delivery via CDN. I also increased stakeholder confidence by writing end-to-end tests with Playwright in the CI/CD pipeline, publishing test results on GitHub Pages using Allure Reports, and sending Slack notifications with links to generated test results on every push. In parallel, I architected a reusable design system in React and Radix UI that improved UI consistency, accessibility, and developer efficiency across products, which aligns closely with Verve's emphasis on frontend consistency and high-quality interface delivery.

At Descasio, as **Senior Frontend Developer**, I led the design and implementation of an intuitive user interface using React, achieving a **25% boost in user engagement** while helping create a scalable frontend architecture that accelerated development by **30%**. I enhanced the development workflow by introducing automated testing frameworks, including Jest and Enzyme, which led to a **20% decrease in bug reports**. I also optimized frontend performance and load efficiency by identifying and resolving render bottlenecks using React Profiler and Lighthouse Audits, reducing bundle size by **30-40%**, which led to a **35% faster load time**. Earlier at ActivEdge, I built dynamic data visualization dashboards using React and react-chartjs and developed real-time interfaces for transaction-heavy workflows, experience that maps naturally to Verve's campaign management, targeting, and data visualization needs.

I would welcome the opportunity to discuss how my background in React, Next.js, frontend performance, design systems, and data-rich product interfaces can help Verve continue building intuitive retail media experiences at scale.

Sincerely,

Ogbonna Arinze
