Hiring Team
autarc (YC S24)
Berlin Mitte, Germany

Dear Hiring Team,

autarc is replacing five fragmented tools with one AI-powered platform that lets energy trades businesses handle everything from LiDAR-based heat load calculations to automated customer intake, and over 1,000 craft businesses already depend on it daily. That combination of deep AI integration with real B2B SaaS impact is exactly the kind of product I want to help build. I am applying for the Senior Fullstack Engineer (AI) role, bringing 8 years of professional experience shipping AI-powered web applications with React, TypeScript, PostgreSQL, and Docker.

At Genentech, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma vector database, enabling users to connect their data sources and query them conversationally in real time. Alongside this, I architected a reusable design system in React and Radix UI with Tailwind CSS that improved UI consistency and developer velocity across multiple product teams, and integrated Playwright end-to-end tests into the CI/CD pipeline with GitHub Actions for release reliability.

More recently, I built OurNigeria (ournigeria.ng) from the ground up as a fullstack AI platform, architecting an Nx monorepo managing 6 applications with NestJS, Next.js, React 19, and Tailwind CSS v4. I designed a multi-agent AI system with 5 specialized agents and a hybrid RAG pipeline combining pgvector similarity search with BM25 full-text search over 708K+ vector embeddings. The entire stack runs on PostgreSQL 16 with Prisma, Docker Compose production deployments, and Langfuse for LLM observability, which I understand is part of autarc's own toolchain. This experience building a product-focused AI system end-to-end, from database schema design to real-time SSE streaming to production Docker deployments, maps directly to the 50/50 frontend-backend split you are looking for.

I am product-minded by nature and energized by turning ideas into reliable, well-tested code quickly. I would love to discuss how my experience integrating AI models into user-facing SaaS products can help autarc accelerate its next phase of growth. I look forward to hearing from you.

Sincerely,

Ogbonna Arinze
