Hiring Team
IMAGO
Berlin, Germany

Dear Hiring Team,

IMAGO's media aggregation platform sits at an intersection I find genuinely exciting: building a content-rich, performance-critical web product that serves users at scale. As a Senior Full-Stack Web Engineer with 8 years of experience shipping production systems in React, Next.js, TypeScript, and Tailwind CSS, paired with backend work in NodeJS, NestJS, and PostgreSQL, I am well-positioned to own features end-to-end on your platform, from database schema design through deployment.

At Genentech (Roche), I led the migration of a clinical trial data product from Vue.js to React, refactoring legacy components while shipping features in parallel, exactly the kind of incremental modernization your role calls for. I also co-developed a full-stack Next.js application powered by a RAG system with OpenAI, LangChain, and a Chroma vector database, giving me deep experience building data-intensive features across the entire stack. I architected a reusable design system in React, Radix UI, and Tailwind CSS that improved UI consistency and developer velocity across multiple product teams, and I integrated Playwright end-to-end tests into the CI/CD pipeline via GitHub Actions to ensure release reliability.

More recently, I built OurNigeria (ournigeria.ng), an AI-powered civic tech platform, as an Nx monorepo managing 6 applications: NestJS API backends, Next.js frontends with React 19 and Tailwind CSS v4, and a document ingestion pipeline processing 700+ documents. I designed the PostgreSQL database schema with Prisma, configured Docker Compose production deployments with multi-stage Dockerfiles and health checks, and implemented SSR-based SEO optimization with Open Graph metadata and JSON-LD structured data. This experience directly maps to your needs around Docker, CI/CD, automated testing, database design, and SEO.

I am drawn to IMAGO's modern tech stack and the challenge of building a media platform where performance, reliability, and search optimization directly impact the product experience. I would welcome the opportunity to discuss how my fullstack experience and collaborative engineering approach can contribute to your team in Berlin.

Sincerely,

Ogbonna Arinze
