Hiring Team
Otera
Berlin, Germany

Dear Hiring Team,

Otera's vision of moving enterprises beyond augmentation into full autonomy, with 90%+ straight-through processing in regulated industries like insurance and banking, is exactly the kind of high-stakes AI challenge I want to help build. As a Senior Fullstack Engineer with 8 years of professional experience across React, TypeScript, Node.js, and AI-integrated products, I am eager to contribute to Otera's agentic automation platform, particularly as you scale following the €15M Series A.

My most relevant work maps directly to Otera's core challenges. I recently architected OurNigeria, a full-stack platform with a multi-agent AI system using 5 specialized agents for intent classification and domain-specific RAG-powered analysis, processing 700+ documents with 708K+ vector embeddings. The system uses a hybrid retrieval pipeline combining pgvector similarity search with BM25 full-text search and Cohere reranking, served through a NestJS backend with SSE streaming, all managed as an Nx monorepo with 6 applications. At Genentech (Roche), I co-developed a Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, and Chroma vector database, giving me direct experience integrating AI/ML capabilities into production products. On the frontend architecture side, I architected a reusable design system in React and Radix UI at Genentech, introduced Redux and React Query for state management, and at Descasio reduced bundle sizes by 30-40% and achieved a 35% faster load time through systematic performance profiling.

Beyond the technical work, I bring a strong cross-functional and mentorship mindset. At Genentech, I collaborate closely with backend engineers on authentication strategies and have mentored junior developers. At Descasio, I established engineering standards for code quality, testing, and deployment that accelerated CI/CD processes across the team. The combination of fullstack delivery, AI integration experience, and team leadership aligns well with Otera's need for engineers who can own features end-to-end while working alongside product, design, and ML teams.

I would welcome the opportunity to discuss how my experience building agentic AI systems, scalable frontend architectures, and backend services can help Otera deliver autonomous enterprise automation to clients like Allianz, Siemens, and Bayer. Thank you for your consideration.

Sincerely,

Ogbonna Arinze
